

ULTRAVOLT EFL SERIES

ENHANCED FLOATING HOT DECK LOW-VOLTAGE POWER SUPPLIES

The UltraVolt® EFL series of floating hot deck, low voltage (LV) power supplies offers an integrated solution for systems requiring LV power and controls with high voltage isolation. Combining a highly isolated, DC-to-DC, multioutput low-voltage power supply (LVPS) with an advanced isolated digital and analog I/O topology, the EFL subsystem provides both power and controls to floating-hot deck circuitry. This solution, when combined with one or more Advanced Energy high voltage power supplies or other circuitry, can provide high performance solutions for a variety of applications.

PRODUCT HIGHLIGHTS

- Precision analog control
- Linearity of $\pm 0.05\%$ and accuracy of $\pm 0.2\%$
- 10 ppm temperature coefficient
- Isolated up to 15 kV or 30 kV
- Isolation resistance of 150 G Ω (15 kV) or 2 G Ω (30 kV)
- 4 regulated floating LV power outputs
- Isolated digital and analog I/O to and from floating hot deck

TYPICAL APPLICATIONS

- Floating/stacked ion or e-beam biases
- Floating filament bias
- Floating pulsers and gated grids
- Floating capacitance meters
- Floating high side current monitors
- Floating leakage testers

AT A GLANCE

Nominal Output Voltage

Output #1: +12/+24 VDC
Output #2 and #4: ± 15 VDC
Output #3: +5.1 VDC

Maximum Output Power

12, 24, or 36 W

Isolation Voltage

15 kV or 30 kV

Temperature Coefficient

<10 ppm/°C

NORMAL, HALF-QUIET, AND QUIET MODES

All EFLs feature a mode control. Three different models — normal, half-quiet, and quiet — are selectable via the voltage level at the mode pin. A voltage between -1.0 and +0.8 V keeps the unit in normal mode; the up and down analog channels follow their inputs. If the mode feature is not used, the mode pin must be grounded for the EFL to operate properly. A voltage more negative than -4.0 V places the EFL in half-quiet mode. The up channels do not respond to changes in their inputs in half-quiet mode. A voltage greater than +3.75 V and less than +5.0 V places the EFL in quiet mode. In quiet mode, the up and down channels do not respond to changes in their inputs. The voltage level at the mode pin must not exceed +5.0 V at any time. Please contact Advanced Energy for an analysis of your requirements.

Note: If a voltage >0.8 V is applied to the mode pin, it must source less than 400 μ A.

ABOUT ADVANCED ENERGY

Since 1981, Advanced Energy (AE) — and its UltraVolt® family of products — has perfected how power performs for its customers. For both end users and OEMs, AE's comprehensive portfolio of standard and custom high-voltage components precisely match system specifications to deliver unparalleled energy, quality, and performance. Through close customer collaboration, design expertise, application insight, and world-class support, AE creates successful partnerships and enables customers to push the boundaries of innovation and stay ahead of evolving market needs.

PRECISION | POWER | PERFORMANCE | TRUST

CAUTION:
