

## Features

- Formerly a **KEKOVARICON** product
- Six model sizes equivalent to standard disc varistors
- Smaller nominal dimensions than disc varistors
- Broad range of current and energy handling capabilities

- +85 °C Continuous operating temperature
- Low clamping voltage
- Available with straight or crimped leads
- Available in tape and reel packaging for automatic pick-and-place
- RoHS compliant\*

## SV Series – Special Medium Voltage Varistors

### General Information

The SV series is a series of lead style epoxy coated square or rectangular shaped varistors with an AC operating voltage ranging from 60 V to 550 V. This series offers both standard and custom options.

The standard offering consists of square shaped varistors with extremely high current and energy capabilities and a low clamping voltage, providing an increased level of protection for the transients expected in telecommunication and AC power networks. Compared to electrically equivalent disc varistors, SV varistors are produced with smaller nominal dimensions.

In addition to the standard offering, customers are offered the option to design their own customized varistor to suit their specific application needs. Parameters free to be chosen are: non-standard DC/AC operating voltage, leakage current, clamping voltage, maximum surge current, energy absorption level, maximum dissipation power as well as shape - the dimensions being the function of required electrical parameters and vice-versa.

### Summary of Custom Varistor Options

- DC operating voltage range ( $V_{dc}$ ): 85 V to 745 V (up to 1300 V for customized products)
- AC operating voltage range ( $V_{rms}$ ): 60 V to 550 V (up to 1000 V for customized products)
- Six standard sizes available; other customized sizes available upon request
- Broad range of current and energy handling capabilities
- +85 °C Continuous operating temperature
- Available electrical parameter options: AC/DC operating voltage, leakage current, clamping voltage, maximum surge current, energy absorption level, maximum dissipation power and threshold voltage temperature coefficient
- Available in tape and reel packaging for automatic pick-and-place
- Model SVxxxK20 with  $I_{max} = 1 \times 15 \text{ kA} @ 8/20 \mu\text{s}$  is available upon request
- Model SVxxxK23 with  $I_{max} = 1 \times 20 \text{ kA} @ 8/20 \mu\text{s}$  is available upon request

# SV Series – Special Medium Voltage Varistors

**BOURNS®**

## Full Custom Parameter Designed Medium Voltage Varistors

The SV series of full custom parameter designed varistors consists of square and rectangular shaped varistors, available either as epoxy coated lead style components or as metalized pellets.

The customer can specify the varistor electrical properties and set the limits of size parameters in accordance with the General Technical Data, as provided below. The customer can also choose to have standard electrical parameters in a non-standard varistor shape and size to best fit the available housing. The customer has our full engineering support to help realize his specific protection requirement.

## General Technical Data

Electrical Parameters	Value	Units
Varistor Threshold Voltage ( $V_n$ ) Range at 1 mA .....	100 to 910.....	V
Continuous:		
Steady State Applied Voltage:		
DC Voltage Range ( $V_{dc}$ ).....	85 to 745.....	V
AC Voltage Range ( $V_{rms}$ ).....	60 to 550.....	V
Transient:		
Peak Single Pulse Surge Current, 8/20 $\mu$ s Waveform ( $I_{max}$ ) .....	> 5500.....	A/cm <sup>2</sup>
Single Pulse Surge Energy, 10/1000 $\mu$ s Waveform ( $W_{max}$ ) .....	> 400.....	J/cm <sup>3</sup>
<b>Protective Level Parameters</b>		
Clamping Voltage.....	< 1.9 x $V_{dc}$ .....	V
Coefficient of non-linearity:		
Minimum .....	45	
Typical .....	60	
Leakage Current Level:		
@ 25 °C.....	0.5.....	$\mu$ A/cm <sup>2</sup>
@ 85 °C.....	10.....	$\mu$ A/cm <sup>2</sup>
<b>Environmental Parameters</b>		
Operating Ambient Temperature .....	-40 to +85 .....	°C
Storage Temperature Range .....	-40 to +125 .....	°C
Minimum Threshold Voltage		
Temperature Coefficient .....	-0.001 .....	%/°C
<b>Design Parameters</b>		
Leaded		
Coating .....	Epoxy resin	
Lead Style.....	Straight or crimped	
Metalized Pallet .....	Solderable electrode finish	
Shape .....	Square, rectangular	
Packaging .....	Bulk, tape and reel	
<b>Size Parameters</b>		
Minimum Size.....	5 x 5.....	mm
Maximum Size.....	23 x 23.....	mm
Lead Spacing.....	5.0, 7.5, 10.....	mm
Wire Diameter.....	0.6, 0.8, 1.0.....	mm

## How to Order

Series Designator	SV = SV Series
Max. Continuous Operating Voltage ( $V_{rms}$ )	
$V_n$ Tolerance	K = $\pm 10$ % (Standard) J = $\pm 5$ % (Available on Request)
Model Size	5 = 5 mm      14 = 14 mm 7 = 7 mm      20 = 20 mm 10 = 10 mm    23 = 23 mm
Packaging	R = Reel (Standard)* B = Bulk (Standard) A = Ammo Pack (Available on Request)* <i>*Reel and Ammo Pack options not available for Model Sizes 20 and 23.</i>
Lead Style	1 = Straight Leads 5 = Crimped Leads M = Metalized pellet (Available upon request)
Special Parameters	YY = Unique two digit suffix is assigned to each customer requesting special parameters. Please contact Bourns for more information.

## Instructions for Creating Orderable Part Number:

- 1) Start with base part number in characteristics table (example: SV250K20).
- 2) Add Packaging: Bulk (example part number becomes SV250K20B).
- 3) Add Lead Style: 1 (example part number becomes SV250K20BL1).
- 4) Part number can have no spaces or lower case letters.

## Typical Part Marking

## SV Series – Special Medium Voltage Varistors

**BOURNS®**

### Assembly Recommendations for Through-Hole Components

Very often before soldering through-hole components, their leads get bent. It is important not to damage the components during lead bending. Damage most commonly incurred during bending is cracks in epoxy parts, which can lead to increased humidity sensitivity of a component and, consequentially, a shorter lifetime.

In order to avoid epoxy damage, it is necessary to:

- fix the most sensitive point (epoxy parts) of a component body
- bend the wire at least 2 mm below the end of epoxy parts

Other potential damage to a component which can lead to component failure or a shorter lifetime is thermal shock during manual soldering with a soldering iron. This can occur when a soldering iron is placed too close to one point of the component body and it happens most often when the solder joint is too close to the varistor body.

### Resistance to Soldering Heat

In the case of automatic wave soldering, it is important to provide sufficient resistance to soldering heat. In order to prevent any potential problems, internal standards were introduced for testing the resistance to soldering heat of through-hole components: 300 °C, 10 seconds.

### Pb-free Wave Soldering Profile Recommendations

Recommended soldering profiles for all above components are in accordance with JEDEC standard curves (J-STD-020D) and are, therefore, compatible with the Pb-free process.

### Lead-free Wave Soldering Profile - Pb-free wave profile requirements for soldering heat resistance of components

Parameter	Symbol	Specification
Preheating temperature gradient		4 °C/sec. max.
Preheating time	$t_1$	2 to 5 min.
Min. preheating temperature	$T_1$	130 °C
Max. preheating temperature	$T_2$	180 °C
Melting temperature/point	$T_{meltv}$	217 °C
Time in wave soldering phase ( $w_1 + w_2$ )	$t_{w1+w2}$	10 sec.
Max. wave temperature ( $w_1 + w_2$ )	$T_s$	265 °C +0/-5 °C
Cooling temperature gradient		6° C/sec. max.
Temperature jump from $T_2$ to $T_3$ ( $w_1$ )	$T_{3(w1)} - T_2$	120 °C max
Time from 25 °C to $T_3$ (wave temperature)		8 min. max.

### Reliability Testing Procedures

Varistor test procedures comply with CECC 42200, IEC 1051-1/2 (and AEC-Q200, if applicable for automotive grade products). Test results are available upon customer request. Special tests can be performed upon customer request.

Reliability Parameter	Test	Tested According to	Condition to be Satisfied after Testing
<b>AC/DC Bias Reliability</b>	AC/DC Life Test	CECC 42200, Test 4.20 or IEC 1051-1, Test 4.20, AEC-Q200 Test 8 - 1000 h at UCT	$  \delta V_N (1 \text{ mA})   < 10 \%$
<b>Pulse Current Capability</b>	$I_{\max} 8/20 \mu\text{s}$	CECC 42200, Test C 2.1 or IEC 1051-1, Test 4.5 10 pulses in the same direction at 2 pulses per minute at maximum peak current for 10 pulses	$  \delta V_N (1 \text{ mA})   < 10 \%$ no visible damage
<b>Pulse Energy Capability</b>	$W_{\max} 10/1000 \mu\text{s}$	CECC 42200, Test C 2.1 or IEC 1051-1, Test 4.5 10 pulses in the same direction at 1 pulse every 2 minutes at maximum peak current for 10 pulses	$  \delta V_N (1 \text{ mA})   < 10 \%$ no visible damage
<b>WLD Capability</b>	WLD x 10	ISO 7637, Test pulse 5, 10 pulses at rate of 1 per minute	$  \delta V_N (1 \text{ mA})   < 15 \%$ no visible damage
<b>V<sub>jump</sub> Capability</b>	V <sub>jump</sub> 5 min.	Increase of supply voltage to $V \geq V_{\text{jump}}$ for 1 minute	$  \delta V_N (1 \text{ mA})   < 15 \%$ no visible damage
<b>Environmental and Storage Reliability</b>	Climatic Sequence	CECC 42200, Test 4.16 or IEC 1051-1, Test 4.17 a) Dry heat, 16h, UCT, Test Ba, IEC 68-2-2 b) Damp heat, cyclic, the first cycle: 55 °C, 93 % RH, 24 h, Test Db 68-2-4 c) Cold, LCT, 2 h, Test Aa, IEC 68-2-1 d) Damp heat cyclic, remaining 5 cycles: 55 °C, 93 % RH, 24 h/cycle, Test Bd, IEC 68-2-30	$  \delta V_N (1 \text{ mA})   < 10 \%$
	Thermal Shock	CECC 42200, Test 4.12, Test Na, IEC 68-2-14, AEC-Q200 Test 16, 5	$  \delta V_N (1 \text{ mA})   < 10 \%$ no visible damage
	Steady State Damp Heat	CECC 42200, Test 4.17, Test Ca, IEC 68-2-3, AEC-Q200 Test 6, 56 days, 40 °C, 93 % RH, AEC-Q200 Test 7: Bias, Rh, T all at 85.	$  \delta V_N (1 \text{ mA})   < 10 \%$
	Storage Test	IEC 68-2-2, Test Ba, AEC-Q200 Test 3, 1000 h at maximum storage temperature	$  \delta V_N (1 \text{ mA})   < 5 \%$

### Reliability Testing Procedures (Continued)

Reliability Parameter	Test	Tested According to	Condition to be Satisfied after Testing
<b>Mechanical Reliability</b>	Solderability	CECC 42200, Test 4.10.1, Test Ta, IEC 68-2-20 solder bath and reflow method	Solderable at shipment and after 2 years of storage, criteria: >95% must be covered by solder for reflow meniscus
	Resistance to Soldering Heat	CECC 42200, Test 4.10.2, Test Tb, IEC 68-2-20 solder bath nad reflow method	$ \delta V_{\eta} (1 \text{ mA})  < 5 \%$
	Terminal Strength	JIS-C-6429, App. 1, 18N for 60 sec. - same for AEC-Q200 Test 22	No visual damage
	Board Flex	JIS-C-6429, App. 2, 2 mm min. AEC-Q200 test 21 - Board flex: 2 mm flex min.	$ \delta V_{\eta} (1 \text{ mA})  < 2 \%$ No visible damage
	Vibration	CECC 42200, Test 4.15, Test Fc, IEC 68-2-6, AEC-Q200 Test 14 Frequency range 10 to 55 Hz (AEC: 10-2000 Hz) Amplitude 0.75 m/s <sup>2</sup> or 98 m/s <sup>2</sup> (AEC: 5 g for 20 minutes) Total duration 6 h (3x2 h) (AEC: 12 cycles each of 3 directions) Waveshape - half sine	$ \delta V_{\eta} (1 \text{ mA})  < 2 \%$ No visible damage
	Mechanical Shock	CECC 42200, Test 4.14, Test Ea, IEC 68-2-27, AEC-Q200 Test 13. Acceleration = 490 m/s <sup>2</sup> (AEC: MIL-STD-202-Method 213), Pulse duration = 11 ms, Waveshape - half sine; Number of shocks = 3x6	$ \delta V_{\eta} (1 \text{ mA})  < 10 \%$ No visible damage
<b>Electrical Transient Conduction</b>	ISO-7637-1 Pulses	AEC-Q200 Test 30: Test pulses 1 to 3. Also other pulses - freestyle.	$ \delta V_{\eta} (1 \text{ mA})  < 10 \%$ No visible damage

# SV Series – Special Medium Voltage Varistors

**BOURNS®**

## Terminology

Term	Symbol	Definition
Rated AC Voltage .....	$V_{rms}$ .....	Maximum continuous sinusoidal AC voltage (<5 % total harmonic distortion) which may be applied to the component under continuous operation conditions at +25 °C
Rated DC Voltage.....	$V_{dc}$ .....	Maximum continuous DC voltage (<5 % ripple) which may be applied to the component under continuous operating conditions at +25 °C
Supply Voltage.....	$V$ .....	The voltage by which the system is designated and to which certain operating characteristics of the system are referred; $V_{rms} = 1.1 \times V$
Leakage Current.....	$I_{dc}$ .....	The current passing through the varistor at $V_{dc}$ and at +25 °C or at any other specified temperature
Varistor Voltage .....	$V_n$ .....	Voltage across the varistor measured at a given reference current ( $I_n$ )
Reference Current.....	$I_n$ .....	Reference current = 1 mA DC
Clamping Voltage .....	$V_c$ .....	The peak voltage developed across the varistor under standard atmospheric conditions, when passing an 8/20 $\mu s$ class current pulse
Protection Level		
Class Current.....	$I_c$ .....	A peak value of current which is 1/10 of the maximum peak current for 100 pulses at two per minute for the 8/20 $\mu s$ pulse
Voltage Clamping Ratio.....	$V_c/V_{app}$ .....	A figure of merit measure of the varistor clamping effectiveness as defined by the symbols $V_c/V_{app}$ , where ( $V_{app} = V_{rms}$ or $V_{dc}$ )
Jump Start Transient .....	$V_{jump}$ .....	The jump start transient results from the temporary application of an overvoltage in excess of the rated battery voltage. The circuit power supply may be subjected to a temporary overvoltage condition due to the voltage regulation failing or it may be deliberately generated when it becomes necessary to boost start the car.
Rated Single Pulse .....	$W_{max}$ .....	Energy which may be dissipated for a single 10/1000 $\mu s$ pulse of a maximum rated current, with rated AC voltage or rated DC voltage also applied, without causing device failure
Transient Energy		
Load Dump Transient .....	WLD .....	Load Dump is a transient which occurs in automotive environments. It is an exponentially decaying positive voltage which occurs in the event of a battery disconnect while the alternator is still generating charging current with other loads remaining on the alternator circuit at the time of battery disconnect.
Rated Peak Single Pulse.....	$I_{max}$ .....	Maximum peak current which may be applied for a single 8/20 $\mu s$ pulse, with rated line voltage also applied, without causing device failure
Transient Current		
Rated Transient Average .....	$P$ .....	Maximum average power which may be dissipated due to a group of pulses occurring within a specified isolated time period, without causing device failure at 25 °C
Power Dissipation		
Capacitance.....	$C$ .....	Capacitance between two terminals of the varistor measured @ 1 kHz
Non-linearity Exponent .....	$\alpha$ .....	A measure of varistor nonlinearity between two given operating currents, $I_n$ and $I_1$ as described by $I = k V \exp(a)$ , where: <ul style="list-style-type: none"> <li>- <math>k</math> is a device constant,</li> <li>- <math>I_1 &lt; I &lt; I_n</math> and</li> <li>- <math>a \log(I_1/I_n)/\log(V_1/V_n) = 1/\log(V_1/V_n)</math>, where:</li> <li>- <math>I_r</math> is reference current (1 mA) and <math>V_n</math> is varistor voltage</li> <li>- <math>I_1 = 10 I_n</math>, <math>V_1</math> is the voltage measured at <math>I_1</math></li> </ul>
Response Time.....	$t_r$ .....	The time lag between application of a surge and varistor's "turn-on" conduction action
Varistor Voltage Temperature .....	TC .....	$(V_n @ 85^\circ C - V_n @ 25^\circ C) / (V_n @ 25^\circ C) \times 60^\circ C \times 100$
Coefficient		
Insulation Resistance .....	IR.....	Minimum resistance between shorted terminals and varistor surface
Isolation Voltage .....		The maximum peak voltage which may be applied under continuous operating conditions between the varistor terminations and any conducting mounting surface
Operating Temperature .....		The range of ambient temperature for which the varistor is designed to operate continuously as defined by the temperature limits of its climatic category
Climatic Category .....	LCT/UCT/DHD .....	LCT & UCT = Lower and Upper Category Temperature - the minimum and maximum ambient temperatures for which a varistor has been designed to operate continuously. DHD = Dump Heat Test Duration
Storage Temperature.....		Storage temperature range without voltage applied
Current/Energy Derating.....		Derating of maximum values when operated above UCT

REV. F 05/21

Specifications are subject to change without notice.

Users should verify actual device performance in their specific applications.

The products described herein and this document are subject to specific legal disclaimers as set forth on the last page of this document, and at [www.bourns.com/docs/legal/disclaimer.pdf](http://www.bourns.com/docs/legal/disclaimer.pdf).

This legal disclaimer applies to purchasers and users of Bourns® products manufactured by or on behalf of Bourns, Inc. and its affiliates (collectively, "Bourns").

Unless otherwise expressly indicated in writing, Bourns® products and data sheets relating thereto are subject to change without notice. Users should check for and obtain the latest relevant information and verify that such information is current and complete before placing orders for Bourns® products.

The characteristics and parameters of a Bourns® product set forth in its data sheet are based on laboratory conditions, and statements regarding the suitability of products for certain types of applications are based on Bourns' knowledge of typical requirements in generic applications. The characteristics and parameters of a Bourns® product in a user application may vary from the data sheet characteristics and parameters due to (i) the combination of the Bourns® product with other components in the user's application, or (ii) the environment of the user application itself. The characteristics and parameters of a Bourns® product also can and do vary in different applications and actual performance may vary over time. Users should always verify the actual performance of the Bourns® product in their specific devices and applications, and make their own independent judgments regarding the amount of additional test margin to design into their device or application to compensate for differences between laboratory and real world conditions.

Unless Bourns has explicitly designated an individual Bourns® product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949) or a particular qualification (e.g., UL listed or recognized), Bourns is not responsible for any failure of an individual Bourns® product to meet the requirements of such industry standard or particular qualification. Users of Bourns® products are responsible for ensuring compliance with safety-related requirements and standards applicable to their devices or applications.

Bourns® products are not recommended, authorized or intended for use in nuclear, lifesaving, life-critical or life-sustaining applications, nor in any other applications where failure or malfunction may result in personal injury, death, or severe property or environmental damage. Unless expressly and specifically approved in writing by two authorized Bourns representatives on a case-by-case basis, use of any Bourns® products in such unauthorized applications might not be safe and thus is at the user's sole risk. Life-critical applications include devices identified by the U.S. Food and Drug Administration as Class III devices and generally equivalent classifications outside of the United States.

Bourns expressly identifies those Bourns® standard products that are suitable for use in automotive applications on such products' data sheets in the section entitled "Applications." Unless expressly and specifically approved in writing by two authorized Bourns representatives on a case-by-case basis, use of any other Bourns® standard products in an automotive application might not be safe and thus is not recommended, authorized or intended and is at the user's sole risk. If Bourns expressly identifies a sub-category of automotive application in the data sheet for its standard products (such as infotainment or lighting), such identification means that Bourns has reviewed its standard product and has determined that if such Bourns® standard product is considered for potential use in automotive applications, it should only be used in such sub-category of automotive applications. Any reference to Bourns® standard product in the data sheet as compliant with the AEC-Q standard or "automotive grade" does not by itself mean that Bourns has approved such product for use in an automotive application.

Bourns® standard products are not tested to comply with United States Federal Aviation Administration standards generally or any other generally equivalent governmental organization standard applicable to products designed or manufactured for use in aircraft or space applications. Bourns expressly identifies Bourns® standard products that are suitable for use in aircraft or space applications on such products' data sheets in the section entitled "Applications." Unless expressly and specifically approved in writing by two authorized Bourns representatives on a case-by-case basis, use of any other Bourns® standard product in an aircraft or space application might not be safe and thus is not recommended, authorized or intended and is at the user's sole risk.

The use and level of testing applicable to Bourns® custom products shall be negotiated on a case-by-case basis by Bourns and the user for which such Bourns® custom products are specially designed. Absent a written agreement between Bourns and the user regarding the use and level of such testing, the above provisions applicable to Bourns® standard products shall also apply to such Bourns® custom products.

Users shall not sell, transfer, export or re-export any Bourns® products or technology for use in activities which involve the design, development, production, use or stockpiling of nuclear, chemical or biological weapons or missiles, nor shall they use Bourns® products or technology in any facility which engages in activities relating to such devices. The foregoing restrictions apply to all uses and applications that violate national or international prohibitions, including embargos or international regulations. Further, Bourns® products and Bourns technology and technical data may not under any circumstance be exported or re-exported to countries subject to international sanctions or embargoes. Bourns® products may not, without prior authorization from Bourns and/or the U.S. Government, be resold, transferred, or re-exported to any party not eligible to receive U.S. commodities, software, and technical data.

To the maximum extent permitted by applicable law, Bourns disclaims (i) any and all liability for special, punitive, consequential, incidental or indirect damages or lost revenues or lost profits, and (ii) any and all implied warranties, including implied warranties of fitness for particular purpose, non-infringement and merchantability.
