

SMT POWER INDUCTORS

Toroid Series
Ruggedized

- ⚙ Ruggedized header with SLED rails for secure board mounting
- ⚙ Current Rating: up to 3.8ADC
- ⚙ Inductance Range: 9.4μH to 439μH
- ⚙ Moisture Sensitivity Level: 1

Electrical Specifications @ 25°C – Operating Temperature – 40°C to +130°C

- NOTES:
- The reference inductance at rated DC current is a typical value.
 - Temperature rise is 50°C in typical buck or boost circuits at 250kHz and with the reference ET applied to the inductor.
 - Total loss in the inductor is 380mW for 50°C temperature rise above ambient.
 - To estimate temperature rise in a given application, determine copper and core losses, divide by 380 and multiply by 50.
 - For the copper loss, calculate $IDC^2 \times RN$.
 - For core loss, using frequency (f) and operating flux density (B), calculate $6.11 \times 10^{-18} \times B^{2.7} \times f^{2.04}$.
 - For flux density (B), calculate ET (V-μsec) for the application, divide by ET100 from the table, and multiply by 100.
 - Limit the DC bias (H) to 46 orsted. Calculate H by multiplying H1 from the table by IDC of the application.
 - Optional Tape & Reel packaging can be ordered by adding a "T" suffix to the part number (i.e. PL8500 becomes **PL8500T**).
