

Genum Products

Features

- SMPTE ST 424, SMPTE ST 292 and SMPTE ST 259 compliant
- Supports DVB-ASI at 270Mb/s
- Supports data rates from 270Mb/s to 6.25Gb/s
- Wide common-mode range input buffer
 - ♦ 100mV sensitivity
 - ♦ supports DC-coupling to industry-standard differential logic
 - ♦ on-chip 100 Ω differential data input termination
- Input signal trace equalization
- Differential coaxial-cable-driving output
 - ♦ selectable slew rates
 - ♦ adjustable output swing from 500mV_{pp} to 1040mV_{pp}
 - ♦ Disable control
- Robust signal presence function
- Excellent output eye quality
- Power supply operation at +3.3V or +2.5V
- 135mW power consumption (+2.5V supply)
- Operating temperature range: -40°C to +85°C
- Small footprint QFN package (4mm x 4mm)
 - ♦ Drop-in compatible to the GS2978 and GS2988
- Pb-free and RoHS compliant

Applications

- 6G UHD-SDI, SMPTE ST 424, SMPTE ST 292 and SMPTE ST 259 coaxial cable serial digital interfaces
- Serialized 8b/10b encoded video streams up to 6.25Gb/s

Description

The GS6080 is a high-speed BiCMOS integrated circuit designed to drive one or two 75 Ω coaxial cables.

The GS6080 may drive data rates up to 6.25Gb/s and provides two selectable slew rates in order to achieve compliance to SMPTE ST 424, SMPTE ST 292 and SMPTE ST 259.

The GS6080 accepts industry-standard differential input levels including LVPECL and CML.

Input trace equalization compensates for up to 10 inches of FR4 trace loss while in HD, 3G, and UHD modes. This feature is enabled and disabled using the $\overline{\text{EQ_EN}}$ pin.

The $\overline{\text{DISABLE}}$ pin powers-down the entire device.

The GS6080 features adjustable output swing using an external bias resistor. The single-ended output swing is adjustable from 500mV_{pp} to 1040mV_{pp}.

An output signal presence function, the $\overline{\text{SP}}$ pin, indicates whether an active signal is present at the output of the GS6080.

The GS6080 can be powered from either a +3.3V or a +2.5V supply. Power consumption is typically 135mW using a +2.5V power supply.

The GS6080 is Pb-free, and the encapsulation compound does not contain halogenated flame retardant.

This component and all homogeneous subcomponents are RoHS compliant.

GS6080 Functional Block Diagram

Revision History

Version	ECO	PCN	Date	Changes and/or Modifications
6	021599	—	September 2014	Updated Table 2-3 with new data rate value.
5	021471	—	August 2014	Updated Table 1-1 .
4	020839	—	July 2014	Updated max power and current values in Table 2-2 .
3	016276	—	November 2013	Corrected pin order in Table 1-1 to match proper pin numbering arrangement
2	013843	—	July 2013	Updated from Draft Data Sheet to Final Data Sheet.
1	012265	—	June 2013	Updated Table 2-3: AC Electrical Characteristics . Changed the product name to GS6080 (and the DOC ID to PDS-060045) to reflect the production-ready status of the device.
0	010378	—	December 2012	New document.

1.1 Pin Assignment

Figure 1-1: 16-Pin QFN

1.2 Pin Descriptions

Table 1-1: Pin Descriptions

Pin Number	Name	Type	Description
1, 2	DDI, $\overline{\text{DDI}}$	Input	Serial data differential input. See Section 4.1 for details.
3	VEE	Power	Most negative power supply connection for the input buffer and core. Connect to ground.
4	RSET	Input	External output amplitude control resistor connection. See Section 4.6 for details.
5, 7, 8, 13, 15	N/C	—	No Connect. These pins are not connected internally.

Table 1-1: Pin Descriptions (Continued)

Pin Number	Name	Type	Description
6	$\overline{\text{DISABLE}}$	Input	Output Disable (control signal input). When set LOW, the entire device is powered-down. When set HIGH, the SDO/ $\overline{\text{SDO}}$ pins will output a serial data signal. See Section 4.4 for details. This pin has an internal pull-up.
9	VCC	Power	Most positive power supply connection. Connect to +3.3V or +2.5V.
10	SD_EN	Input	SD Slew Rate Enable (control signal input). Sets the slew rate for SDO/ $\overline{\text{SDO}}$. See Section 4.3.1 for details. This pin has an internal pull-up.
11, 12	$\overline{\text{SDO}}$, SDO	Output	Serial data differential output.
14	$\overline{\text{SP}}$	Output	Signal Presence (status signal output). Indicates presence of a signal at the pre-driver to the device's output stage. See Section 4.5 for details.
16	$\overline{\text{EQ_EN}}$	Input	Equalizer Enable (control signal input). See Section 4.2 for details. This pin has an internal pull-up. Note: this pin must be pulled HIGH or left floating for operation in SD mode.
—	Center Pad	Power	Connect to most negative power supply plane following the recommendations in Recommended PCB Footprint on page 16 .

2. Electrical Characteristics

2.1 Absolute Maximum Ratings

Table 2-1: Absolute Maximum Ratings

Parameter	Value
Supply Voltage	-0.5V to +3.6 V _{DC}
Input ESD Voltage	2.5kV
Storage Temperature Range (T _g)	-50°C to +125°C
Input Voltage Range (any input)	-0.3 to (V _{CC} +0.3)V
Operating Temperature Range	-40°C to +85°C
Solder Reflow Temperature	260°C

Note: Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation outside of the ranges shown in Table 2-1 is not implied.

2.2 DC Electrical Characteristics

Table 2-2: DC Electrical Characteristics

V_{CC} = +3.3V ±5% or +2.5V ±5%; T_A = -40°C to +85°C, unless otherwise shown

Parameter	Symbol	Conditions	Min	Typ	Max	Units	Notes
Supply Voltage	V _{CC}	3.3V Typical	3.135	3.3	3.465	V	—
		2.5V Typical	2.375	2.5	2.625	V	—
Power Consumption (+2.5V)	P _D	SDO/ $\overline{\text{SDO}}$ enabled	—	135	160	mW	1
		SDO/ $\overline{\text{SDO}}$ disabled (Power-Down Mode)	—	3	5	mW	1
Power Consumption (+3.3V)	P _D	SDO/ $\overline{\text{SDO}}$ enabled	—	185	222	mW	1
		SDO/ $\overline{\text{SDO}}$ disabled (Power-Down Mode)	—	4	6	mW	1
Supply Current (+2.5V)	I _S	SDO/ $\overline{\text{SDO}}$ enabled	—	54	61	mA	1
		SDO/ $\overline{\text{SDO}}$ disabled (Power-Down Mode)	—	1	1.8	mA	1
Supply Current (+3.3V)	I _S	SDO/ $\overline{\text{SDO}}$ enabled	—	56	64	mA	1
		SDO/ $\overline{\text{SDO}}$ disabled (Power-Down Mode)	—	1	1.8	mA	1

Table 2-2: DC Electrical Characteristics (Continued)

$V_{CC} = +3.3V \pm 5\%$ or $+2.5V \pm 5\%$; $T_A = -40^\circ C$ to $+85^\circ C$, unless otherwise shown

Parameter	Symbol	Conditions	Min	Typ	Max	Units	Notes
Output Voltage	V_{CMOUT}	Common mode	—	$V_{CC} - V_{OUT}$	—	V	—
Input Voltage	V_{CMIN}	Common mode	$1.4 + \Delta V_{DDI}/2$	—	$V_{CC} - \Delta V_{DDI}/2$	V	—
$\overline{SD_EN}$, $\overline{DISABLE}$, $\overline{EQ_EN}$ Input	V_{IH}	$I_{IH} \leq 150\mu A$	1.7	—	—	V	—
	V_{IL}	$I_{IL} \leq 150\mu A$	—	—	0.4	V	—
$\overline{SP}$ Drive Strength	—	—	2	—	—	mA	—

Notes:

1. Power consumed in GS6080 only. Termination resistors draw extra current.

2.3 AC Electrical Characteristics

Table 2-3: AC Electrical Characteristics

$V_{CC} = +3.3V \pm 5\%$ or $+2.5V \pm 5\%$; $T_A = -40^\circ C$ to $+85^\circ C$, unless otherwise shown

Parameter	Symbol	Conditions	Min	Typ	Max	Units	Notes
Serial input data rate	DR_{SDO}	—	270	—	6250	Mb/s	1

	—	1.485Gb/s	—	10	—	ps _{pp}	2
	—	270Mb/s	—	30	—	ps _{pp}	2
Rise/Fall time	t_r, t_f	6.25Gb/s	—	66	—	ps	3, 7
	t_r, t_f	$SD_EN=0$	—	—	135	ps	3
	t_r, t_f	$SD_EN=1$	400	—	800	ps	3
Mismatch in rise/fall time	$\Delta t_r, \Delta t_f$	HD/3G/UHD modes	—	—	35	ps	7
Duty cycle distortion	—	$SD_EN=0$, 6.25Gb/s	—	18	—	ps	4, 5, 7
	—	$SD_EN=0$, 2.97Gb/s	—	—	14	ps	4, 5
	—	$SD_EN=0$, 1.485Gb/s	—	—	20	ps	4, 5
	—	$SD_EN=1$	—	—	50	ps	4, 5
Overshoot	—	$SD_EN=0$	—	—	10	%	4

Table 2-3: AC Electrical Characteristics (Continued)

$V_{CC} = +3.3V \pm 5\%$ or $+2.5V \pm 5\%$; $T_A = -40^{\circ}C$ to $+85^{\circ}C$, unless otherwise shown

Parameter	Symbol	Conditions	Min	Typ	Max	Units	Notes
Output Return Loss	ORL	5 MHz – 1.485GHz	16	19	—	dB	6
		1.485GHz – 2.97GHz	12	15	—	dB	6
Output Voltage Swing	V_{OUT}	$R_{SET} = 750\Omega$	750	800	850	mV _{pp}	4
Input Voltage Swing	ΔV_{DDI}	Guaranteed functional.	100	—	2200	mV _{ppd}	—
		Guaranteed to meet all published specifications.	250	—	2200	mV _{ppd}	—
Output Disable Delay	—	Output enabled to output disabled.	—	—	80	ns	—
Output Enable Delay	—	Output disabled to output enabled.	—	—	4	μs	—

Notes:

1. The input coupling capacitor must be set accordingly for lower data rates.
2. Turning on input trace equalization will reduce jitter in most applications.
3. Rise/Fall time measured between 20% and 80%.
4. Single-ended into 75 Ω external load.
5. Calculated as the actual positive bit-width compared to the expected positive bit-width using a 1010 pattern.
6. ORL depends on board design. The GS6080 achieves this specification on Semtech's evaluation boards.
7. Results based on Validation Data using recommended Application Circuit.

3. Input/Output Circuits

Figure 3-1: Differential Input Stage (DDI/DDDI)

Figure 3-2: Differential Output Stage (SDO/SDO-bar)

Figure 3-3: Control Input (DISABLE, SD_EN, EQ_EN)

4. Detailed Description

4.1 Serial Data Input

The GS6080 features a differential input buffer with on-chip 100Ω differential termination.

The serial data input signal is connected to the DDI and $\overline{\text{DDI}}$ input pins of the device.

Input signals can be single-ended or differential, DC or AC-coupled.

The serial data input buffer is capable of operation with any binary coded signal that meets the input signal level requirements, in the range of 270Mb/s to 6.25Gb/s.

The input circuit is self-biasing to allow for simple AC or DC-coupling of input signals to the device.

4.2 Input Trace-equalization

The GS6080 features fixed trace-equalization to compensate for PCB trace dielectric losses.

Note: This feature is not available in SD mode, and therefore trace-equalization must be disabled when operating in this mode.

The trace-equalization has two settings, OFF and ON. ON invokes a typical 3dB gain value at 1.5GHz.

Table 4-1: Input Trace-Equalization

EQ_EN	Function
0	Typical 3dB Trace Equalization
1	Trace Equalization OFF
Floating	Trace Equalization OFF

4.3 Serial Data Output

The GS6080 features a current-mode differential output driver capable of driving up to $1040\text{mV}_{\text{pp}}$ single-ended into a 1m length of 75Ω cable terminated at both ends.

The output signal amplitude is set using an external R_{SET} resistor.

The SDO/ $\overline{\text{SDO}}$ pin of the device provide the serial data outputs.

4.3.1 Slew Rate Selection (Rise/Fall Time Requirement)

The GS6080 supports two user-selectable output slew rates.

Control of the slew rate is determined by the setting of the SD_EN input pin.

Table 4-2: Slew Rate Selection

SD_EN	Rise/Fall Time
0	UHD-SDI(5.94Gb/s), SMPTE ST 424 and SMPTE ST 292 compliant
1	SMPTE ST 259 compliant
Floating	SMPTE ST 259 compliant

4.4 Output Disable

The GS6080 supports an output disable function for the serial data differential output.

Control of this function is determined by the setting of the serial output disable ($\overline{\text{DISABLE}}$) control pin.

Setting this pin LOW, disables power to the entire device.

Table 4-3: Output Disable

$\overline{\text{DISABLE}}$	SDO/ $\overline{\text{SDO}}$
0	All Chip Power Down
1	Operational
Floating	Operational

4.5 Signal Presence Indicator ($\overline{\text{SP}}$)

The GS6080 supports a signal presence indicator function.

The signal presence pin ($\overline{\text{SP}}$) is an active-low output that indicates a signal has been detected at the pre-driver output.

The signal presence function measures signal-edge energy to indicate that the pre-driver to the serial data outputs is toggling.

Table 4-4: Signal Presence Indicator

Pre-Driver Output	$\overline{\text{SP}}$ Pin
Signal present	0
No Signal present	1

4.6 Output Amplitude (RSET)

The output amplitude of the GS6080 can be adjusted by changing the value of the R_{SET} resistor as shown in Figure 4-1. For an 800mV_{pp} output with a nominal $\pm 7\%$ tolerance, a value of 750Ω is required. A $\pm 1\%$ SMT resistor should be used.

The R_{SET} resistor is part of an internal DC feedback loop in the GS6080. The resistor should be placed as close as possible to the RSET pin, and connected directly to the V_{CC} plane (traces/wires may cause instability).

Note: Care should be taken when considering layout of the R_{SET} resistor. Please refer to Section 5.1 for more details.

Figure 4-1: V_{OUT} vs. R_{SET}

In order to determine the best starting value for R_{SET} , the following formula should be used:

$$R_{set} = 8 \cdot (R_{trm} / V_{outppSE})$$

Where $V_{outppSE}$ is in Volts, and both resistances are in Ω .

R_{trm} is the value of the termination resistors, which should be equal to the characteristic impedance of the cable, and is typically 75Ω .

The cable must be short ($\leq 1\text{m}$), and terminated at both ends for the formula to be valid.

Example: For a 75Ω cable, $R_{trm} = 75\Omega$ (at both ends), $V_{outppSE} = 800\text{mV}_{pp}$

$$R_{set} = 8 \cdot (75 / 0.8) = 750\Omega$$

This formula is not valid for long, unterminated, or improperly terminated cables.

This formula should be considered as a starting point, and actual swing values may vary based on layout.

Table 4-5: Typical R_{SET} Values

Output Swing (mV _{pp})	R _{SET} (Ω)
1040	576
800	750
500	1210

4.7 Output Return Loss Measurement

The GS6080 has a feature designed to facilitate reliable output return loss (ORL) measurement while the device is still powered. The device can be put into a BALANCE mode which prevents the outputs from toggling while the device is powered on, allowing the ORL to be measured while the device is still powered.

When $\overline{\text{EQ_EN}}$ is LOW while SD_EN is HIGH, the device goes into BALANCE mode. This mode is used during ORL measurement, disabling the AC signal path of the device without powering it down. When in BALANCE mode, the device produces equal pull-down currents in both differential shoulders of the serial data differential output, effectively stopping the output at the output common mode voltage level. Semtech recommends using BALANCE mode when measuring ORL with +2.5V termination voltage.

5. Application Information

5.1 PCB Layout

Special attention must be paid to component layout when designing serial digital interfaces for HDTV.

An FR-4 dielectric can be used, however, controlled impedance transmission lines are required for PCB traces longer than approximately 1 cm. Note the following PCB artwork features used to optimize performance:

- The PCB trace width for HD rate signals is closely matched to SMT component width to minimize reflections due to changes in trace impedance
- The PCB ground plane is removed under the GS6080 output components to minimize parasitic capacitance (**Note:** care should be taken, as removing too much of the plane will make the system susceptible to EMI)
- The PCB ground plane is removed under the GS6080 RSET pin and resistor to minimize parasitic capacitance. The R_{SET} resistor should be directly connected to the VCC plane
- Input and output BNC connectors are surface mounted in-line to eliminate a transmission line stub caused by a BNC mounting via high-speed traces
- High-speed traces are curved to minimize impedance variations due to change of PCB trace width

5.2 Typical Application Circuit

Figure 5-1: Typical Application Circuit

6. Package & Ordering Information

6.1 Package Dimensions

Figure 6-1: Package Dimensions

6.2 Recommended PCB Footprint

Figure 6-2: Recommended PCB Footprint

The Center Pad should be connected to the most negative power supply plane (VEE) by a minimum of 5 vias.

Note: Suggested dimensions only. Final dimensions should conform to customer design rules and process optimizations.

6.3 Packaging Data

Table 6-1: Packaging Data

Parameter	Value
Package type / dimensions / pad pitch	16-pin QFN / 4mm x 4mm / 0.65mm
Package Drawing Reference	JEDEC M0220
Moisture Sensitivity Level	1
Junction to Case Thermal Resistance, θ_{j-c}	31.0°C/W
Junction to Air Thermal Resistance, θ_{j-a} (at zero airflow)	43.8°C/W
Psi, Ψ	11.0°C/W
Pb-free and RoHS compliant, Halogen-free	Yes

6.4 Solder Reflow Profiles

The device is manufactured with Matte-Sn terminations and is compatible with both standard eutectic and Pb-free solder reflow profiles. MSL qualification was performed using the maximum Pb-free reflow profile shown in Figure 6-3.

Figure 6-3: Maximum Pb-free Solder Reflow Profile
