MS7208ABC

Product specification

GENERAL DESCRIPTION

The MS7208ABC is a constant frequency, 6-pin SOT23 current mode step-up converter intended for small, low power applications. The MS7208ABC switches at 1.2MHz and allows the use of tiny low cost capacitors and inductors 2mm or less in height. Internal soft-start results in small inrush current and extends battery life. The MS7208ABC features automatic shifting to pulse frequency modulation mode at light loads.

The MS7208ABC includes under-voltage lockout, current limiting and thermal overload protection to prevent damage in the event of an output overload.

The MS7208ABC is available in a small 6-pin SOT-23 package.

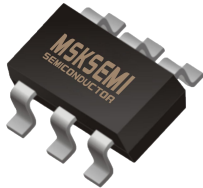

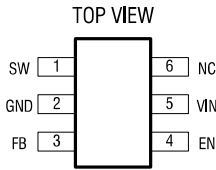

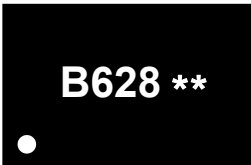

Features

- Integrated 80mΩ Power MOSFET
- 2.5V to 24V Input Voltage
- 1.2MHz Fixed Switching Frequency
- Internal 4A Switch Current Limit
- Adjustable Output Voltage
- Internal Compensation
- Up to 28V Output Voltage
- Automatic Pulse Frequency Modulation Mode at Light Loads
- up to 93% Efficiency
- Available in a 6-Pin SOT23-6 Package

Applications

- Battery-Powered Equipment
- Set-Top Boxed
- LCD Bias Supply
- DSL and Cable Modems and Routers
- Networking cards powered from PCI or PCI express slots

Pin Description AND MARKING

SOT-23-6	Pin Configuration	Marking
	<p>TOP VIEW</p> 	 <p>device code: B628, **= Internal production code</p>

PIN DESCRIPTION

Pin Name	Pin Number	Description
SW	1	Power Switch Output. SW is the drain of the internal MOSFET switch. Connect the power inductor and output rectifier to SW.
GND	2	Ground Pin
FB	3	Feedback Input. The FB voltage is 0.6V. Connect a resistor divider to FB.
EN	4	Regulator On/Off Control Input. A high input at EN turns on the converter, and a low input turns it off. When not used, connect EN to the input supply for automatic startup.
VIN	5	Input Supply Pin. Must be locally bypassed.
NC	6	No Connect

Order Information

Model	Package	MOQ
MS7208ABC	SOT23-6	3000

Typical Application Circuit

Figure 1. Basic Application Circuit

ABSOLUTE MAXIMUM RATINGS (Note 1)

V _{IN} , EN voltages.....	-0.3V to 26V	Junction Temperature(Note2).....	160°C
FB Voltages.....	-0.3V to 6V	Operating Temperature Range.....	-40°C to 85°C
SW Voltage.....	-0.3V to 30V	Lead Temperature(Soldering,10s).....	300°C
Power Dissipation.....	0.6W	Storage Temperature Range.....	-65°C to 150°C
Thermal Resistance θ_{JC}	130°C/W	ESD HBM(Human Body Mode).....	2kV
Thermal Resistance θ_{JA}	250°C/W	ESD MM(Machine Mode).....	200V

ELECTRICAL CHARACTERISTICS (Note 3)

(V_{IN}=V_{EN}=5V, T_A = 25°C, unless otherwise noted.)

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNIT
Operating Input Voltage		2.5		24	V
Under Voltage Lockout				2.4	V
Under Voltage Lockout Hysteresis			100		mV
Current (Shutdown)	V _{EN} = 0V		0.1	1	μA
Quiescent Current (PFM)	V _{FB} =0.7V, No switch		70	150	μA
Quiescent Current (PWM)	V _{FB} =0.5V, switch		1.0	2.0	mA
Switching Frequency			1.2		MHz
Maximum Duty Cycle	V _{FB} = 0V	90			%
EN Input High Voltage		1.5			V
EN Input Low Voltage				0.4	V
FB Voltage		0.588	0.6	0.612	V
SW On Resistance			80	150	mΩ
SW Current Limit	V _{IN} = 5V, Duty cycle=50%		4		A
SW Leakage	V _{SW} = 20V			1	μA
Thermal Shutdown			155		°C

Note 1: Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

Note 2: T_J is calculated from the ambient temperature T_A and power dissipation P_D according to the following formula: T_J = T_A + (P_D) × (250°C/W).

Note 3: 100% production test at 25°C. Specifications over the temperature range are guaranteed by design and characterization.

TYPICAL PERFORMANCE CHARACTERISTICS

FUNCTIONAL BLOCK DIAGRAM

Figure 2. MS7208ABC Block Diagram

FUNCTIONAL DESCRIPTION

The MS7208ABC uses a fixed frequency, peak current mode boost regulator architecture to regulate voltage at the feedback pin. The operation of the MS7208ABC can be understood by referring to the block diagram of Figure 2. At the start of each oscillator cycle the MOSFET is turned on through the control circuitry. To prevent sub-harmonic oscillations at duty cycles greater than 50 percent, a stabilizing ramp is added to the output of the current sense amplifier and the result is fed into the negative input of the PWM comparator. When this voltage equals the output voltage of the error amplifier the power

MOSFET is turned off. The voltage at the output of the error amplifier is an amplified version of the difference between the 0.6V bandgap reference voltage and the feedback voltage. In this way the peak current level keeps the output in regulation. If the feedback voltage starts to drop, the output of the error amplifier increases. This results in more current to flow through the power MOSFET, thus increasing the power delivered to the output. The MS7208ABC has internal soft start to limit the amount of input current at startup and to also limit the amount of overshoot on the output.

APPLICATIONS INFORMATION

Setting the Output Voltage

The internal reference V_{REF} is 0.6V (Typical). The output voltage is divided by a resistor divider, R_1 and R_2 to the FB pin. The output voltage is given by

$$V_{OUT} = V_{REF} \times \left(1 + \frac{R_1}{R_2}\right)$$

Inductor Selection

The recommended values of inductor are 4.7 to 22 μ H. Small size and better efficiency are the major concerns for portable device, such as MS7208ABC used for mobile phone. The inductor should have low core loss at 1.2MHz and low DCR for better efficiency. To avoid inductor saturation current rating should be considered.

Capacitor Selection

Input and output ceramic capacitors of 22 μ F are recommended for MS7208ABC applications. For better voltage filtering, ceramic capacitors with low ESR are recommended. X5R and X7R types are suitable because of their wider voltage and temperature ranges.

Diode Selection

Schottky diode is a good choice for MS7208ABC because of its low forward voltage drop and fast reverse recovery. Using Schottky diode can get better efficiency. The high speed rectification is also a good characteristic of Schottky diode for high switching frequency. Current rating of the diode must meet the root mean square of the peak current and output average current multiplication as following

$$I_D(RMS) \approx \sqrt{I_{OUT} \times I_{PEAK}}$$

The diode's reverse breakdown voltage should be larger than the output voltage.

Layout Consideration

For best performance of the MS7208ABC, the following guidelines must be strictly followed.

- Input and Output capacitors should be placed close to the IC and connected to ground plane to reduce noise coupling.
- The GND should be connected to a strong ground plane for heat sinking and noise protection.
- Keep the main current traces as possible as short and wide.
- SW node of DC-DC converter is with high frequency voltage swing. It should be kept at a small area.
- Place the feedback components as close as possible to the IC and keep away from the noisy devices.

Suggested Pad Layout

- Note:
1. Controlling dimension: in millimeters.
 2. General tolerance: ± 0.05 mm.
 3. The pad layout is for reference purposes only.

Attention

- Any and all MSKSEMI Semiconductor products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your MSKSEMI Semiconductor representative nearest you before using any MSKSEMI Semiconductor products described or contained herein in such applications.
- MSKSEMI Semiconductor assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all MSKSEMI Semiconductor products described or contained herein.
- Specifications of any and all MSKSEMI Semiconductor products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- MSKSEMI Semiconductor strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all MSKSEMI Semiconductor products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of MSKSEMI Semiconductor.
- Information (including circuit diagrams and circuit parameters) herein is for example only ; it is not guaranteed for volume production. MSKSEMI Semiconductor believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the MSKSEMI Semiconductor product that you intend to use.
