## 1. GENERAL DESCRIPTION

### 1.1 OVERVIEW

G154ICE-LH1 is a 15.4" TFT Liquid Crystal Display IAV module with LED Backlight units and 30 pins LVDS interface. This module supports 1280 x 800 WXGA mode and can display 16.7M/262K colors.

The PSWG is to establish a set of displays with standard mechanical dimensions and select electrical interface requirements for an industry standard 15.4" WXGA LCD panel and the LED driving device for Backlight is built in PCBA.

### 1.2 FEATURE

- WXGA (1280 x 800 pixels) resolution
- DE (Data Enable) only mode
- LVDS Interface with 1pixel/clock
- PSWG (Panel Standardization Working Group)
- Wide operating temperature.
- RoHS compliance

### 1.3 APPLICATION

- TFT LCD Monitor
- Factory Application
- Amusement

### 1.4 GENERAL SPECIFICATIONS

Item	Specification	Unit	Note
Active Area	331.2(H) x 207.0(V) (15.4" diagonal)	mm	(1)
Driver Element	a-Si TFT active matrix	-	-
Pixel Number	1280 x R.G.B x 800	pixel	-
Pixel Pitch	0.25875(H) x 0.25875(W)	mm	-
Pixel Arrangement	RGB vertical Stripe	-	-
Display Colors	16.7M / 262K	color	-
Display Mode	Normally Black	-	-
Surface Treatment	Hard Coating (3H), Anti-Glare	-	-
Module Power Consumption	12.2	W	Typ.

## 1.5 MECHANICAL SPECIFICATIONS

Item		Min.	Typ.	Max.	Unit	Note
Module Size	Horizontal(H)	351.5	352	352.5	mm	(1)
	Vertical(V)	229.5	230	230.5	mm	
	Depth(D)	8.5	9	9.5	mm	
Bezel Area	Horizontal	334.2	334.5	334.8	mm	-
	Vertical	210	210.3	210.6	mm	
Active Area	Horizontal	---	331.2	---	mm	
	Vertical	---	207	---	mm	
Weight		-	770.6	809.1	g	

Note(1) Please refer to the attached drawings for more information of front and back outline dimensions.

## 2. ABSOLUTE MAXIMUM RATINGS

### 2.1 ABSOLUTE RATINGS OF ENVIRONMENT

Item	Symbol	Value		Unit	Note
		Min.	Max.		
Operating Ambient Temperature	T <sub>OP</sub>	-30	+80	°C	(1)(2)
Storage Temperature	T <sub>ST</sub>	-30	+80	°C	

Note(1)

- (a) 90 %RH Max.
- (b) Wet-bulb temperature should be 39 °C Max.
- (c) No condensation.

Note(2) Panel surface temperature should be 0°C min. and 80°C max under V<sub>CC</sub>=3.3V, f<sub>r</sub>=60Hz, typical LED string current, 25°C ambient temperature, and no humidity control. Any condition of ambient operating temperature, the surface of active area should be keeping not higher than 80°C.

## 2.2 ELECTRICAL ABSOLUTE RATINGS

### 2.2.1 TFT LCD MODULE

Item	Symbol	Value		Unit	Note
		Min.	Max.		
Power Supply Voltage	VCC	-0.3	4	V	(1)
Logic Input Voltage	V <sub>IN</sub>	-0.3	4	V	

### 2.2.2 BACKLIGHT UNIT

Item	Symbol	Value		Unit	Note
		Min.	Max.		
Converter Voltage	V <sub>i</sub>	-0.3	18	V	(1) , (2)
Enable Voltage	EN	---	5.5	V	
Backlight Adjust	Dimming	---	5.5	V	

Note(1) Permanent damage to the device may occur if maximum values are exceeded. Function operation should be restricted to the conditions described under Normal Operating Conditions.

Note(2) Specified values are for LED (Refer to 3.2 for further information).

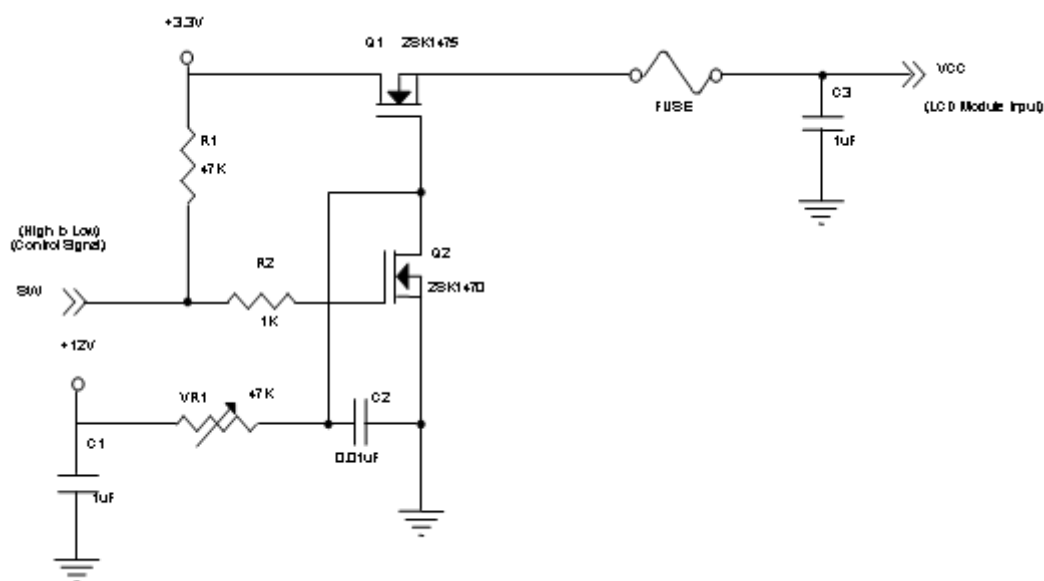

### 3. ELECTRICAL CHARACTERISTICS

#### 3.1 TFT LCD MODULE

Parameter	Symbol	Value			Unit	Note
		Min.	Typ.	Max.		
Power Supply Voltage	$V_{CC}$	3.0	3.3	3.6	V	-
Ripple Voltage	$V_{RP}$	-	-	100	mVp-p	
Inrush Current	$I_{NRUSH}$	-	-	2.0	A	(2)
Power Supply Current	White	-	790	950	mA	(3)a
	Black	-	410	500	mA	(3)b
LVDS differential input voltage	$V_{id}$	200	-	600	mV	
LVDS common input voltage	$V_{ic}$	1.0	1.2	1.4	V	
Differential Input Voltage for LVDS Receiver Threshold	"H" Level	$V_{IH}$	-	100	mV	-
	"L" Level	$V_{IL}$	-100	-	mV	-
Terminating Resistor	$R_T$	-	100	-	Ohm	-

Note(1) The module should be always operated within above ranges.

Note(2) Measurement Conditions:

Note(3) The specified power supply current is under the conditions at  $V_{DD} = 3.3V$ ,  $T_a = 25 \pm 2^\circ C$ , DC Current and  $f_v = 60\text{ Hz}$ , whereas a power dissipation check pattern below is displayed.

a. White Pattern

Active Area

b. Black Pattern

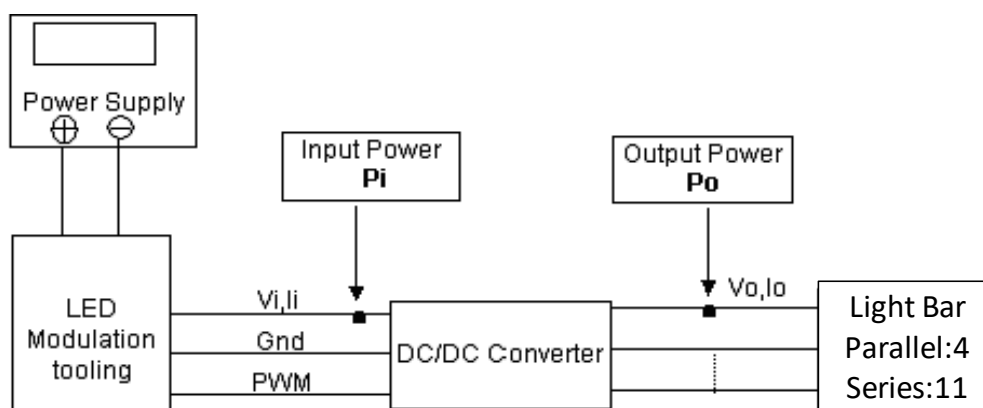

Active Area

## 3.2 BACKLIGHT UNIT

Parameter		Symbol	Value			Unit	Note
			Min.	Typ.	Max.		
Converter Input Voltage		$V_i$	10.8	12.0	13.2	V <sub>DC</sub>	(Duty 100%)
Converter Input Ripple Voltage		$V_{iRP}$	-	-	500	mV	
Converter Input Current		$I_i$	0.6	0.8	1.0	A <sub>DC</sub>	@ $V_i = 12V$ (Duty 100%)
Converter Inrush Current		$I_{iRUSH}$	-	-	3.0	A	@ $V_i$ rising time=10ms ( $V_i=12V$ )
Input Power Consumption		$P_i$	-	9.6	12	W	(1)
EN Control Level	Backlight on	ENLED (BLON)	2.5	3.3	5.0	V	
	Backlight off		0	-	0.3	V	
PWM Control Level	PWM High Level	Dimming (E_PWM)	2.5	-	5.0	V	
	PWM Low Level		0	-	0.15	V	
PWN Noise Range		$V_{Noise}$	-	-	0.1	V	
PWM Control Frequency		$f_{PWM}$	190	200	20k	Hz	(2)
PWM Dimming Control Duty Ratio		-	5	-	100	%	(2), @ $190Hz < f_{PWM} < 1kHz$
			20	-	100	%	(2), @ $1kHz \leq f_{PWM} < 20kHz$
LED Life Time		$L_{LED}$	50,000		-	Hrs	(3)

Note(1) LED current is measured by utilizing a high frequency current meter as shown below:

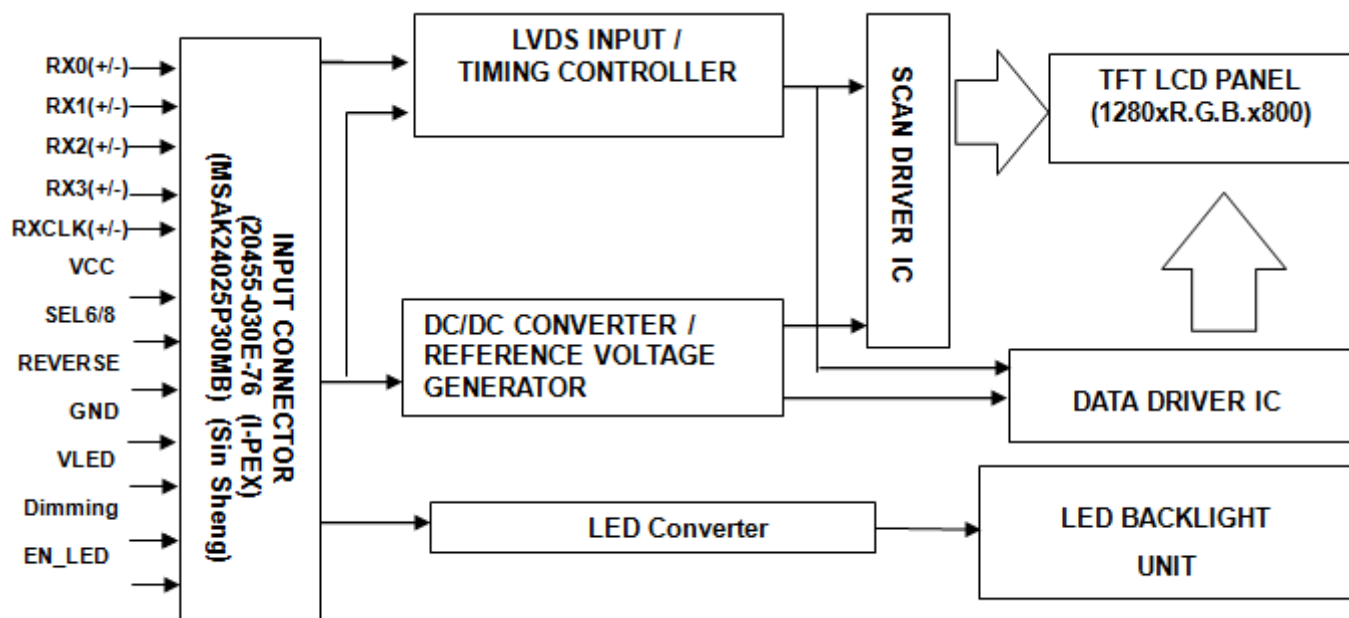

Note(2) The lifetime of LED is estimated data and defined as the time when it continues to operate under the conditions at  $T_a = 25 \pm 2^\circ C$  and Duty 100% until the brightness becomes  $\leq 50\%$  of its original value. Operating LED at high temperature condition will reduce life time and lead to color shift.

Note(3) At 190 ~1kHz PWM control frequency, duty ratio range is restricted from 5% to 100%. 1K ~20kHz PWM control frequency, duty ratio range is restricted from 20% to 100%. If PWM control frequency is applied in the range from 1KHz to 20KHz, The “non-linear” phenomenon on the Backlight Unit may be found. So It’s a suggestion that PWM control frequency should be less than 1KHz.

## 4. BLOCK DIAGRAM

### 4.1 TFT LCD MODULE

## 5. INPUT TERMINAL PIN ASSIGNMENT

### 5.1 TFT LCD MODULE

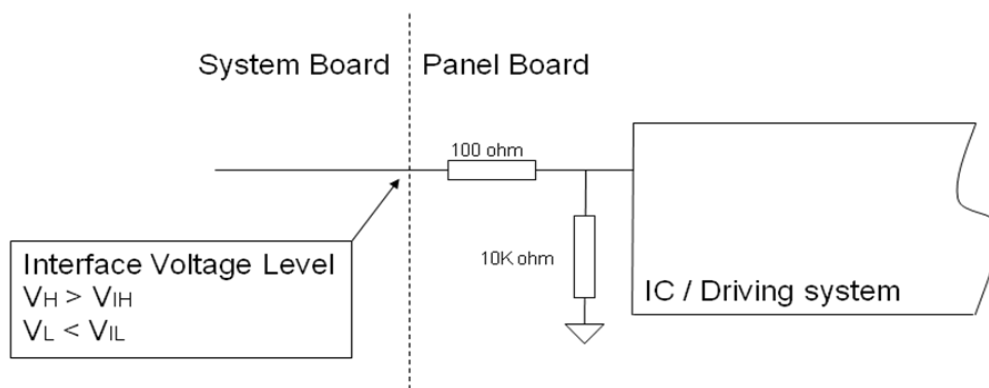

Pin No.	Symbol	Function	Polarity	Note
1	12V	LED Power supply		LED converter power
2	12V	LED Power supply		
3	12V	LED Power supply		
4	12V	LED Power supply		
5	ENLED	Enable Pin		
6	Dimming	Backlight Adjust		
7	GND	Ground		
8	GND	Ground		
9	VCC	Power supply +3.3V		System power
10	VCC	Power supply +3.3V		System power
11	GND	Ground		
12	GND	Ground		
13	RX0-	Differential Data Input, CH0 (Negative )	Negative	
14	RX0+	Differential Data Input, CH0 ( Positive )	Positive	
15	GND	Ground		
16	RX1-	Differential Data Input, CH1 ( Negative )	Negative	
17	RX1+	Differential Data Input , CH1 ( Positive )	Positive	
18	GND	Ground		
19	RX2-	Differential Data Input , CH2 ( Negative )	Negative	
20	RX2+	Differential Data Input , CH2 ( Positive )	Positive	
21	GND	Ground		
22	RXCLK-	Differential Clock Input ( Negative )	Negative	
23	RXCLK+	Differential Clock Input ( Positive )	Positive	
24	GND	Ground		
25	RX3-	Differential Data Input, CH3 (Negative )	Negative	
26	RX3+	Differential Data Input, CH3 ( Positive )	Positive	
27	GND	Ground		
28	SEL6/8	LVDS 6/8 bit select function control, Low or NC → 6 bit Input Mode High → 8 bit Input Mode		(3)
29	Reverse	Scanning direction control Low or NC → normal display (default) High → display with 180 degree rotation		(3)
30	GND	Ground		

Note(1) LVDS Connector type:(STM\_MSAK24025P30MB)/(I-PEX\_20455-030E-76) or equivalent Current Rating: AC/DC 100V 0.8A(AWG#36)

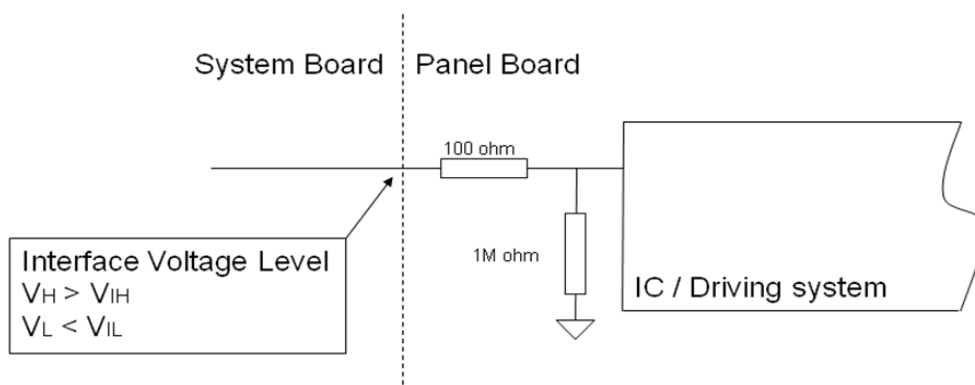

Note(2) User's connector Part No:I-PEX 20453-030T-03 or equivalent.

Note(3) "Low" stands for 0V. "High" stands for 3.3V. "NC" stands for "No Connected".

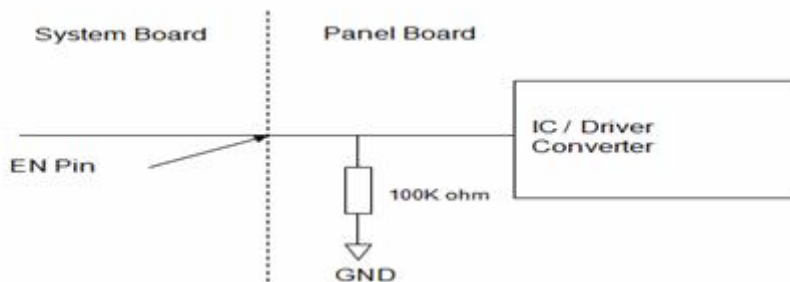

## REVERSE

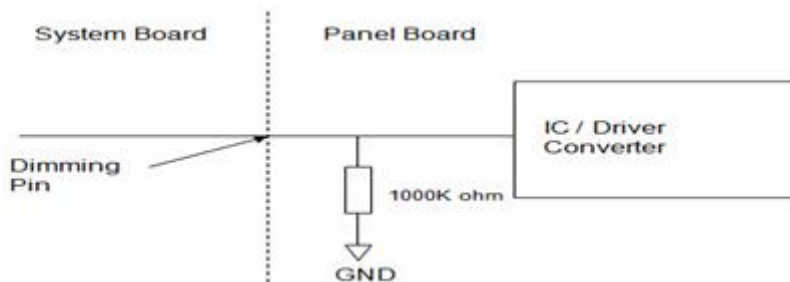

## SEL6/8

## EN Pin

## Dimming Pin

## 5.2 COLOR DATA INPUT ASSIGNMENT

The brightness of each primary color (red, green and blue) is based on the 8-bit gray scale data input for the color. The higher the binary input the brighter the color. The table below provides the assignment of color versus data input.

### 5.2.1 FOR 6-BITS

Color		Data Signal																	
		Red						Green						Blue

Note(1)0: Low Level Voltage, 1: High Level Voltage

## 6. INTERFACE TIMING

### 6.1 INPUT SIGNAL TIMING SPECIFICATIONS

The input signal timing specifications are shown as the following table and timing diagram.

Signal	Item	Symbol	Min.	Typ.	Max.	Unit	Note
LVDS Clock	Frequency	$F_r$	66	71.1	84	MHz	-
	Period	$T_c$	13.41	14.08	14.82	ns	
	Input cycle to cycle jitter	$T_{rdl}$	---	---	200	ns	(a)
	Input Clock to data skew	TLVCCS	$-0.02 \cdot T_c$	-	$0.02 \cdot T_c$	ps	(b)
	Spread spectrum modulation range	$F_{clkin\_mod}$	-	-	$1.02 \cdot F_c$	MHz	(c)
	Spread spectrum modulation frequency	$F_{SSM}$	-	-	200	KHz	
Vertical Display Term	Frame Rate	$F_r$		60		Hz	$T_v = T_{vd} + T_{vb}$
	Total	$T_v$	810	823	1000	$T_h$	-
	Active Display	$T_{vd}$	800	800	800	$T_h$	-
	Blank	$T_{vb}$	$T_v - T_{vd}$	23	$T_v - T_{vd}$	$T_h$	-
Horizontal Display Term	Total	$T_h$	1360	1440	1600	$T_c$	$T_h = T_{hd} + T_{hb}$
	Active Display	$T_{hd}$	1280	1280	1280	$T_c$	-
	Blank	$T_{hb}$	$T_h - T_{hd}$	160	$T_h - T_{hd}$	$T_c$	-

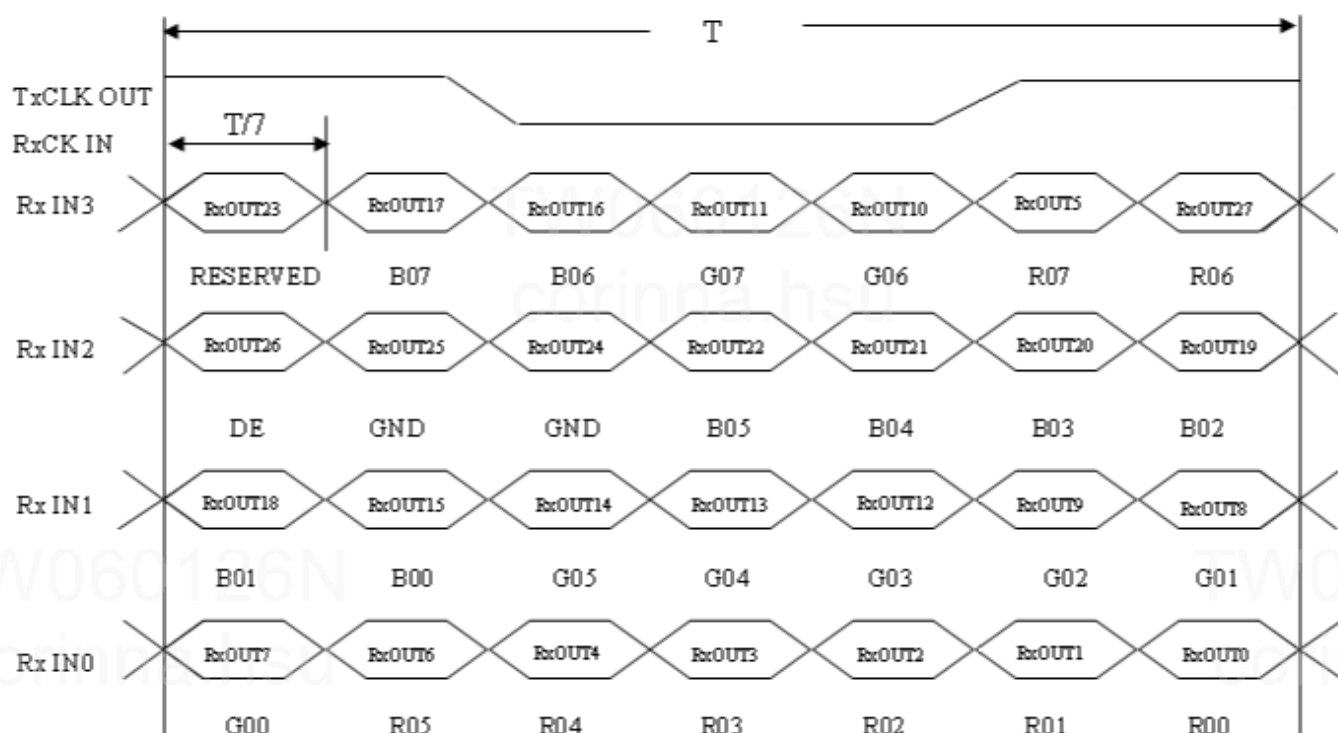

Note(1) Because this module is operated by DE only mode, Hsync and Vsync input signals should be set to low logic level or ground. Otherwise, this module would operate abnormally.

Note(2) The  $T_v(T_{vd}+T_{vb})$  must be integer, otherwise, the module would operate abnormally.

#### INPUT SIGNAL TIMING DIAGRAM

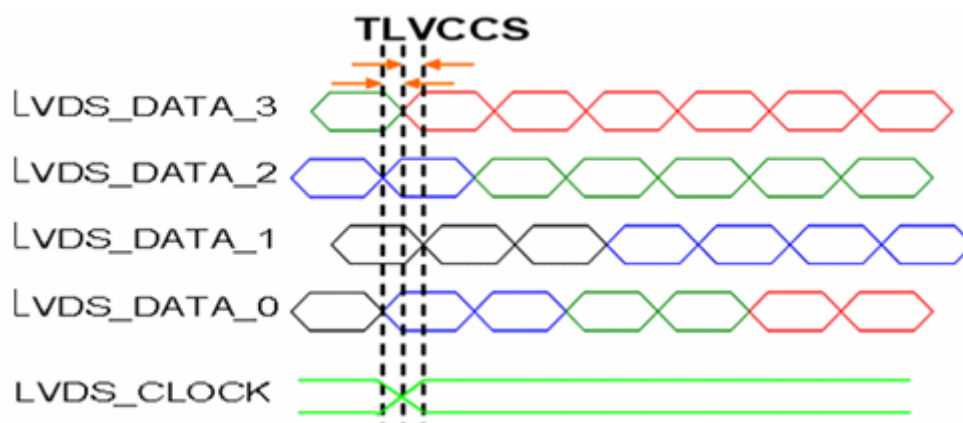

**TIMING DIAGRAM of LVDS**

Note(a) The input clock cycle-to-cycle jitter is defined as below figures.  $Trcl = |T1 - T|$

Note(b) Input Clock to data skew is defined as below figures.

Note(c) The SSCG (Spread spectrum clock generator) is defined as below figures.

## 6.2 POWER ON/OFF SEQUENCE

To prevent a latch-up or DC operation of LCD assembly, the power on/off sequence should be as the diagram below.

Parameter	Value			Units
	Min	Typ	Max	
T1	0.5	-	10	ms
T2	0	-	50	ms
T3	0	-	50	ms
T4	500	-	-	ms
T5	450	-	-	ms
T6	200	-	-	ms
T7	10	-	100	ms
T8	10	-	-	ms
T9	10	-	-	ms
T10	20	-	50	ms

- Note(1) The supply voltage of the external system for the module input should be the same as the definition of Vcc.
- Note(2) When the backlight turns on before the LCD operation of the LCD turns off, the display may momentarily become abnormal screen.
- Note(3) In case of VCC = off level, please keep the level of input signals on the low or keep a high impedance.
- Note(4) T4 should be measured after the module has been fully discharged between power off and on period.
- Note(5) Interface signal shall not be kept at high impedance when the power is on.
- Note(6) INX won't take any responsibility for the products which are damaged by the customers not following the Power Sequence.
- Note(7) There might be slight electronic noise when LCD is turned off (even backlight unit is also off). To avoid this symptom, we suggest "Vcc falling timing" to follow "T7 spec"

### 6.3 SCANNING DIRECTION

The following figures show the image see from the front view. The arrow indicates the direction of scan.

**Fig.1 Normal Scan**

PCBA on the top side

**Fig.2 Reverse Scan**

PCBA on the top side

Fig. 1 Normal scan ( pin 29, REVERSE = LOW or NC )

Fig. 2 Reverse scan (pin 29, REVERSE = HIGH )

## 7. OPTICAL CHARACTERISTICS

### 7.1 TEST CONDITIONS

Item	Symbol	Value	Unit
Ambient Temperature	Ta	25±2	oC
Ambient Humidity	Ha	50±10	%RH
Supply Voltage	According to typical value and tolerance in "ELECTRICAL CHARACTERISTICS"		
Input Signal			
PWM Duty Ratio	D	100	%

### 7.2 OPTICAL SPECIFICATIONS

The relative measurement methods of optical characteristics are shown here and all items are measured at the center point of screen unless otherwise noted. The following items should be measured under the test conditions described above and stable conditions shown in Note (5).

Item	Symbol	Condition	Min.	Typ.	Max.	Unit	Note
Color Chromaticity	Red	Rx	0.597	0.647	0.697	-	(1), (5)
		Ry	0.290	0.340	0.390		
	Green	Gx	0.271	0.321	0.371		
		Gy	0.557	0.607	0.657		
	Blue	Bx	0.102	0.152	0.202		
		By	0.000	0.050	0.100		
	White	Wx	0.263	0.313	0.363		
		Wy	0.279	0.329	0.379		
Center Luminance of White	LC	$\theta X=0^\circ, \theta Y=0^\circ$ Grayscale Maximum	350	450			(4), (5)
Contrast Ratio	CR		500	1000			(2), (5)
Response Time	TR	$\theta X=0^\circ, \theta Y=0^\circ$	-	13	18	-	(3)
	TF		-	12	17	-	
White Variation	$\delta W$	$\theta X=0^\circ, \theta Y=0^\circ$	70	80	-	%	(5), (6)
Viewing Angle	Horizontal	$\theta X+$	80	89	-	Deg.	(1), (5)
		$\theta X-$	80	89	-		
	Vertical	$\theta Y+$	80	89	-		
		$\theta Y-$	80	89	-		

Definition :

Grayscale Maximum : Grayscale 255 (10 bits: grayscale 1023 ; 8 bits : grayscale 255 ; 6 bits: grayscale 63)

White : Luminance of Grayscale Maximum (All R,G,B)

Black : Luminance of grayscale 0 (All R,G,B)

Note(1) Definition of Viewing Angle ( $\theta_x$ ,  $\theta_y$ ):

Note(2) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression at center point.

$$\text{Contrast Ratio (CR)} = \text{White} / \text{Black}$$

Note(3) Definition of Response Time ( $T_R$ ,  $T_F$ ):

Note(4) Definition of Luminance of White (L<sub>c</sub>):

Measure the luminance of White at center point.

Note(5) Measurement Setup:

The LCD module should be stabilized at given temperature to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 40 minutes in a windless room. The measurement placement of module should be in accordance with module drawing.

Note(6) Definition of White Variation (δW):

Measure the luminance of White at 5 points.

Luminance of White : L(X) , where X is from 1 to 5.

$$\delta W = \frac{\text{Minimum [ L(1) to L(5) ]}}{\text{Maximum [ L(1) to L(5) ]}} \times 100\%$$

## 8. RELIABILITY TEST CRITERIA

Test Item	Test Condition	Note
High Temperature Storage Test	80°C, 240 hours	(1),(2) (4),(5)
Low Temperature Storage Test	-30°C, 240 hours	
Thermal Shock Storage Test	-20°C, 0.5 hour ↔ 60°C, 0.5 hour; 100cycles, 1 hour/cycle)	
High Temperature Operation Test	80°C, 240 hours	
Low Temperature Operation Test	-30°C, 240 hours	
High Temperature & High Humidity Operation Test	60°C, RH 90%, 240 hours	(1), (4)
ESD Test (Operation)	150pF, 330Ω, 1 sec/cycle Condition 1 : panel contact, ±8 KV Condition 2 : panel non-contact ±15 KV	
Shock (Non-Operating)	50G, 11ms, half sine wave, 1 time for ± X, ± Y, ± Z direction	
Vibration (Non-Operating)	1.5G, 10 ~ 300 Hz sine wave, 10 min/cycle, 3 cycles each X, Y, Z direction	(2), (3)

Note(1) There should be no condensation on the surface of panel during test ,

Note(2) Temperature of panel display surface area should be 80°C Max.

Note(3) At testing Vibration and Shock, the fixture in holding the module has to be hard and rigid enough so that the module would not be twisted or bent by the fixture.

Note(4) In the standard conditions, there is no function failure issue occurred. All the cosmetic specification is judged before reliability test.

Note(5) Before cosmetic and function test, the product must have enough recovery time, at least 24 hours at room temperature.

## 9. PACKAGING

### 9.1 PACKING SPECIFICATIONS

- (1) 13pcs LCD modules / 1 Box
- (2) Box dimensions: 465(L) X 362 (W) X 314 (H) mm
- (3) Weight: approximately 12.1 Kg (13 modules per box)

### 9.2 PACKING METHOD

**Figure. 9-1 Packing method**

**Figure. 9-2 Packing method**

## 9.3 UN-PACKING METHOD

**Figure. 9-3 UN-Packing method**

## 10. DEFINITION OF LABELS

### 10.1 INX MODULE LABEL

The barcode nameplate is pasted on each module as illustration, and its definitions are as following explanation.

Note (1) Safety Compliance(UL logo) will open after C1 version.

(a) Model Name: G154ICE-LH1

(b) \* \* \* \* : Factory ID

(c) Serial ID: X X X X X X X Y M D X N N N N

Serial ID includes the information as below:

(a)Manufactured Date: Year: 1~9, for 2021~2029

Month: 1~9, A~C, for Jan. ~ Dec.

Day: 1~9, A~Y, for 1<sup>st</sup> to 31<sup>st</sup>, exclude I , O and U

(b)Revision Code: cover all the change

(c)Serial No.: Manufacturing sequence of product

## 11. PRECAUTIONS

### 11.1 ASSEMBLY AND HANDLING PRECAUTIONS

- (1) The module should be assembled into the system firmly by using every mounting hole. Be careful not to twist or bend the module.
- (2) While assembling or installing modules, it can only be in the clean area. The dust and oil may cause electrical short or damage the polarizer.
- (3) Use fingerstalls or soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (4) Do not press or scratch the surface harder than a HB pencil lead on the panel because the polarizer is very soft and easily scratched.
- (5) If the surface of the polarizer is dirty, please clean it by some absorbent cotton or soft cloth. Do not use Ketone type materials (ex. Acetone), Ethyl alcohol, Toluene, Ethyl acid or Methyl chloride. It might permanently damage the polarizer due to chemical reaction.
- (6) Wipe off water droplets or oil immediately. Staining and discoloration may occur if they left on panel for a long time.
- (7) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contacting with hands, legs or clothes, it must be washed away thoroughly with soap.
- (8) Protect the module from static electricity, it may cause damage to the C-MOS Gate Array IC.
- (9) Do not disassemble the module.
- (10) Do not pull or fold the lamp wire.
- (11) Pins of I/F connector should not be touched directly with bare hands.

### 11.2 STORAGE PRECAUTIONS

- (1) When storing for a long time, the following precautions are necessary.
  - (a) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 30°C at humidity 50+/-10%RH.
  - (b) The polarizer surface should not come in contact with any other object.
  - (c) It is recommended that they be stored in the container in which they were shipped.
  - (d) Storage condition is guaranteed under packing conditions.
  - (e) The phase transition of Liquid Crystal in the condition of the low or high storage temperature will be recovered when the LCD module returns to the normal condition
- (2) High temperature or humidity may reduce the performance of module. Please store LCD module within the specified storage conditions.
- (3) It is dangerous that moisture come into or contacted the LCD module, because the moisture may damage LCD module when it is operating.
- (4) It may reduce the display quality if the ambient temperature is lower than 10 °C. For example, the response time will become slowly, and the starting voltage of lamp will be higher than the room temperature.

## 11.3 OTHER PRECAUTIONS

(1) Normal operating condition

(a) Display pattern: dynamic pattern (Real display)

(Note) Long-term static display can cause image sticking.

(2) Operating usages to protect against image sticking due to long-term static display

(a) Static information display recommended to use with moving image.

(3) Abnormal condition just means conditions except normal condition.

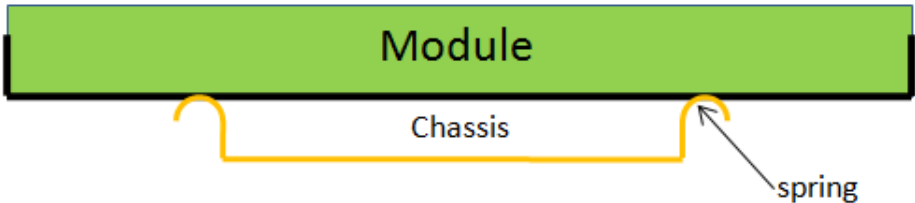

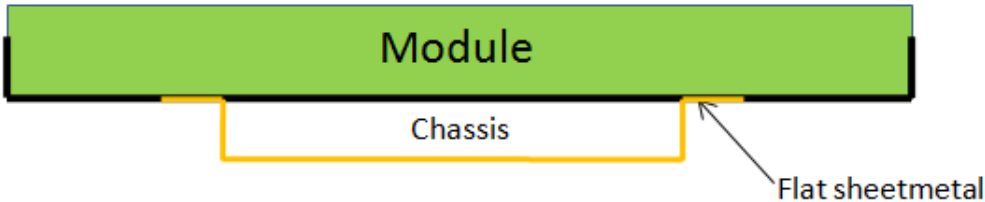

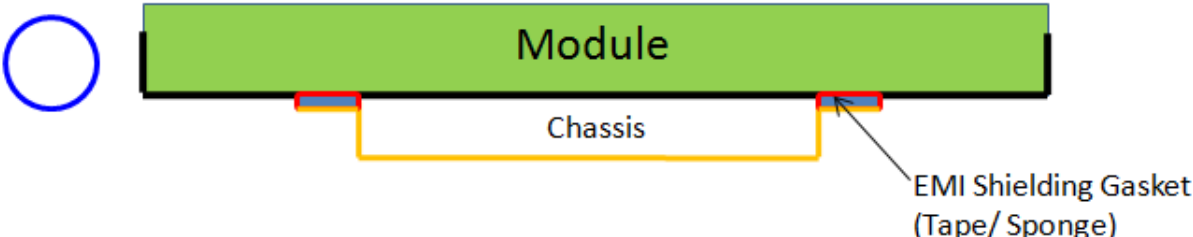

## 12. MECHANICAL CHARACTERISTICS

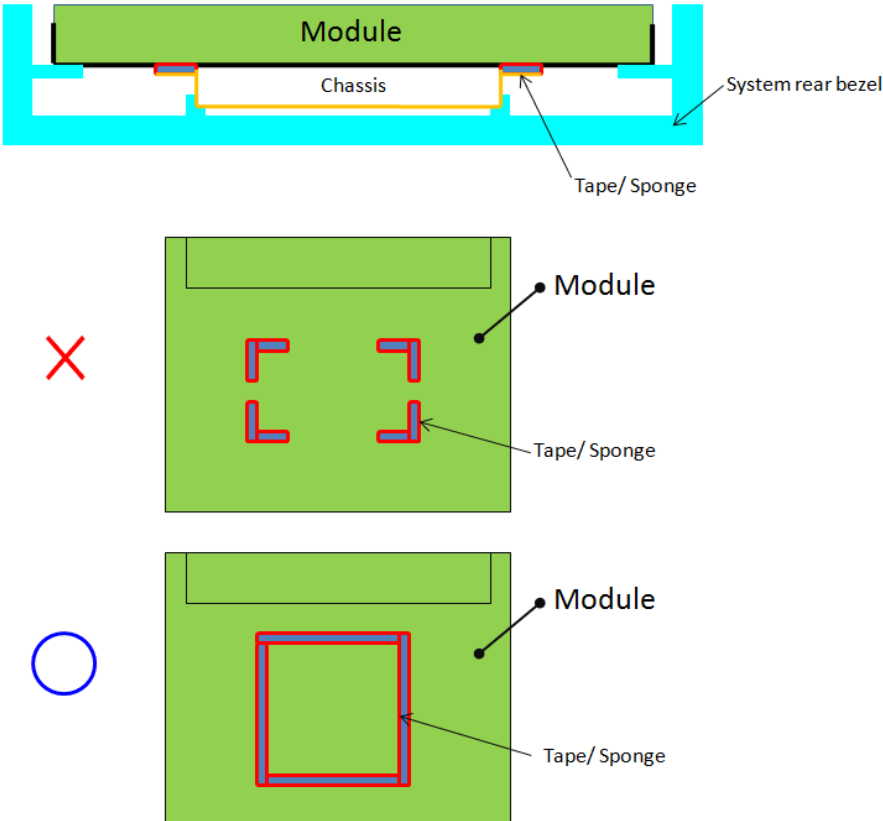

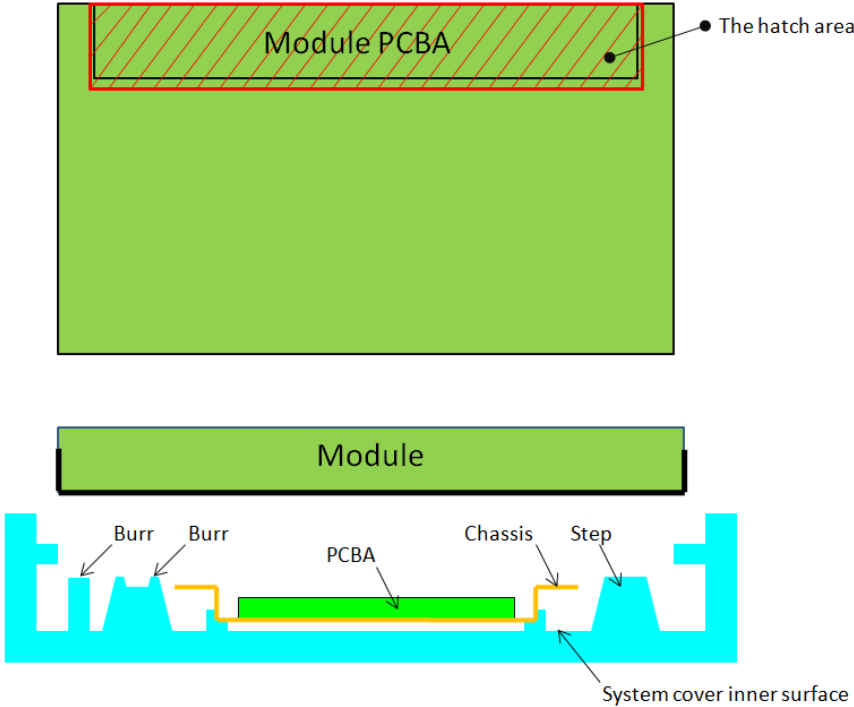

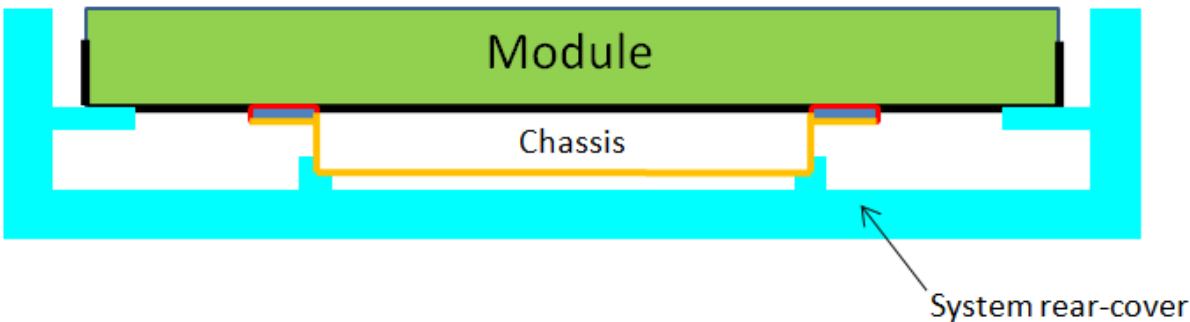

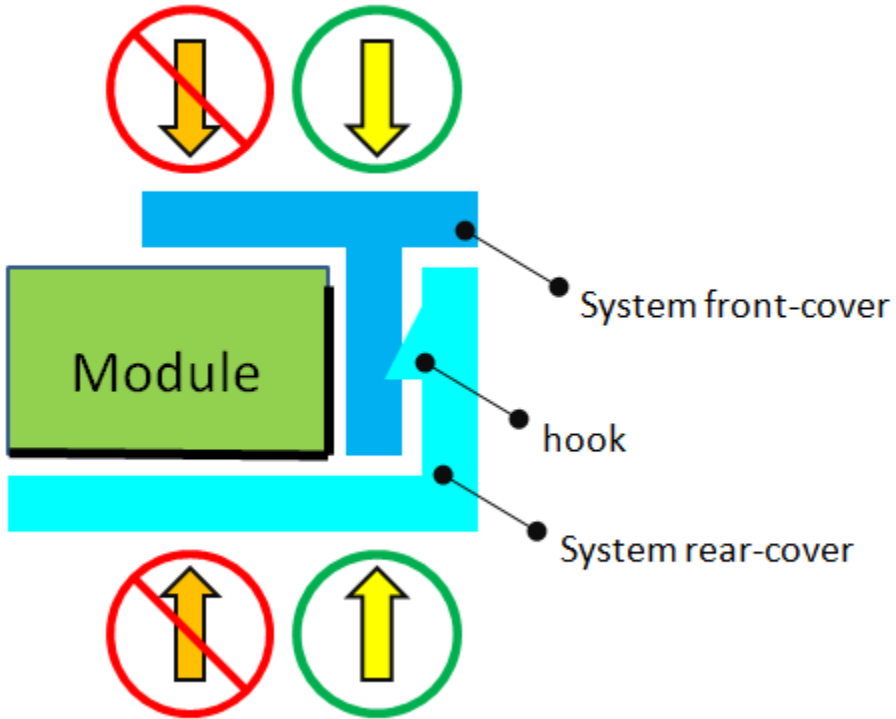

## Appendix. SYSTEM COVER DESIGN NOTICE

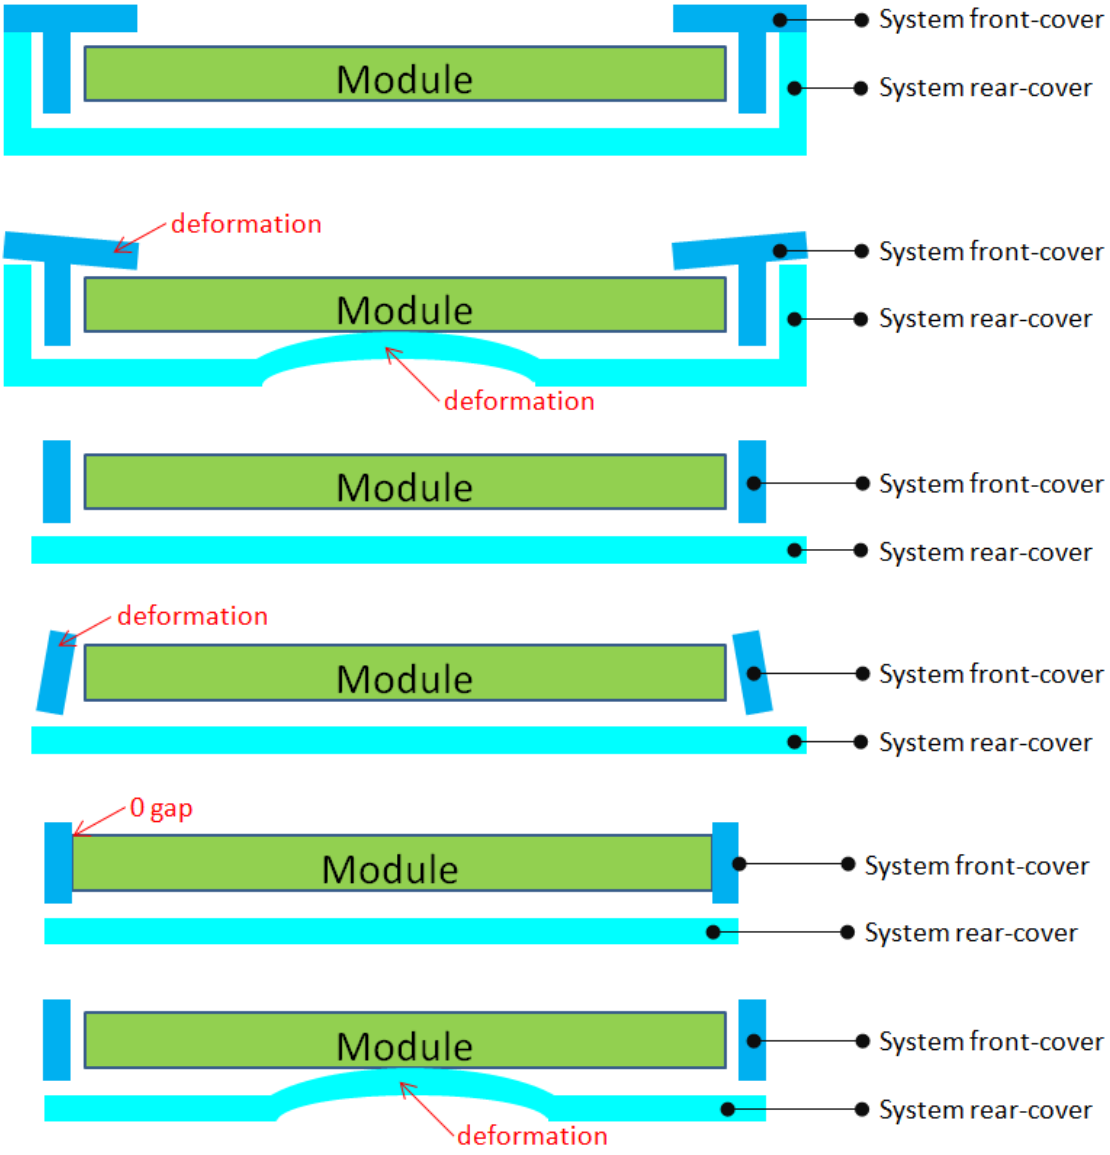

1	Set Chassis and IAVM Module touching Mode
	  
Definition	<p>a.To prevent from abnormal display &amp; white spot after mechanical test, it is not recommended to use spring type chassis.</p> <p>b.We suggest the contact mode between Chassis and Module rear cover is Tape/Sponge, second is Flat sheet metal type chassis.</p>

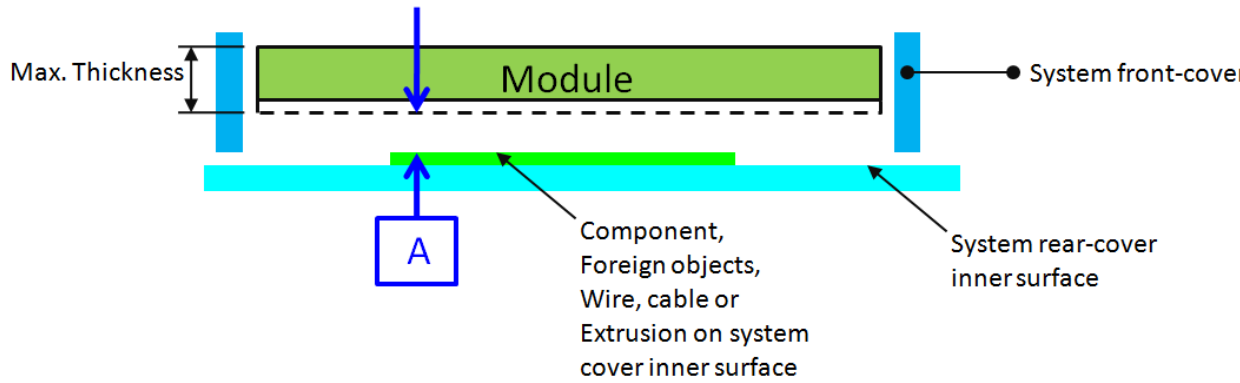

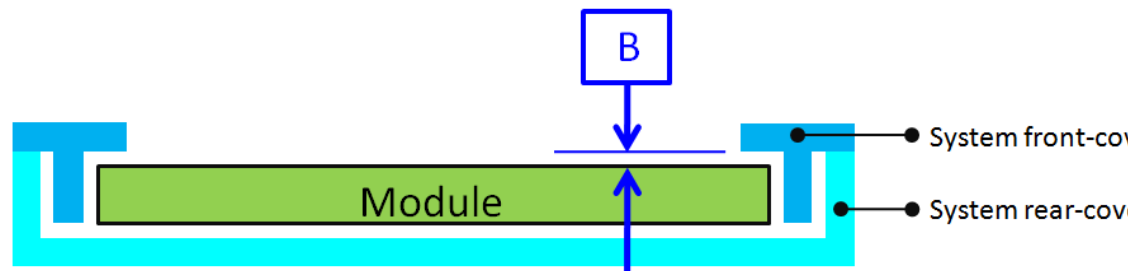

2	Tape/Sponge design on system inner surface
	 <p>The diagrams illustrate the correct and incorrect ways to apply Tape/Sponge between the Module and Chassis. The top diagram shows a cross-section view where the Tape/Sponge is applied as a continuous layer between the Module and the Chassis. The middle diagram, marked with a red 'X', shows an incorrect design where the Tape/Sponge is applied in four separate L-shaped pieces at the corners. The bottom diagram, marked with a blue circle, shows the correct design where the Tape/Sponge is applied as a single rectangular piece covering the entire area between the Module and the Chassis.</p>
Definition	<p>a.To prevent from abnormal display &amp; white spot after mechanical test, we suggest using Tape/Sponge as medium between chassis and Module rear cover could reduce the occurrence of white spot.</p> <p>b.When using the Tape/Sponge, we suggest it be lay over between set chassis and Module rear cover. It is not recommended to add Tape/Sponge in separate location. Since each Tape/Sponge may act as pressure concentration location.</p>

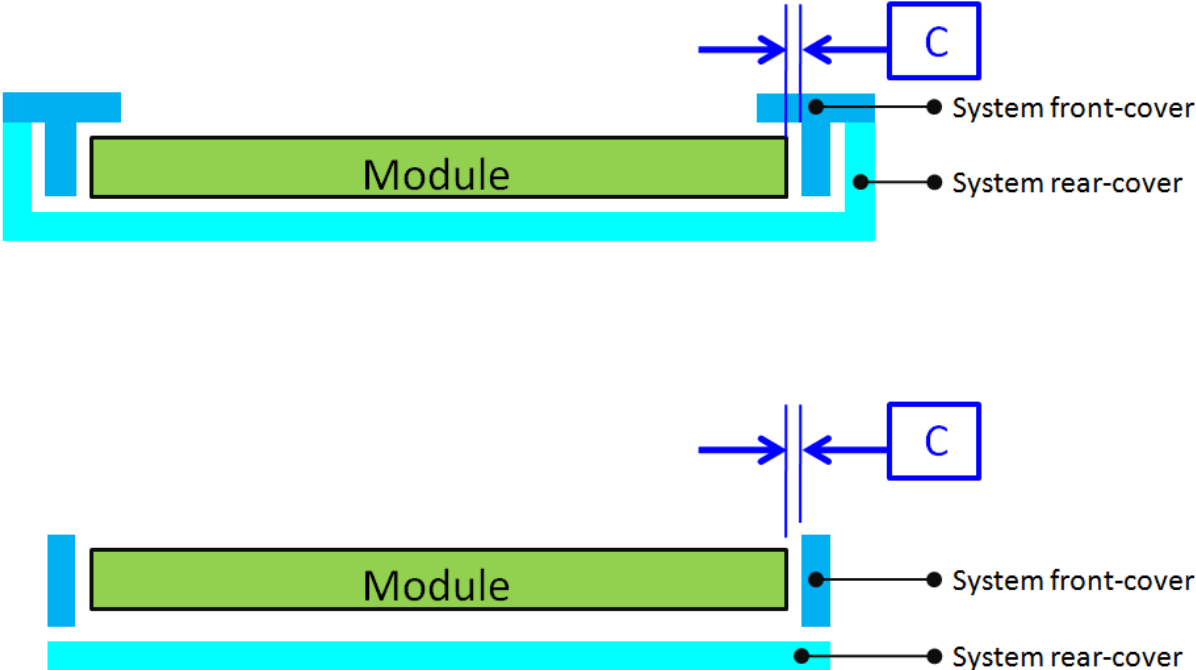

3	<b>System inner surface examination</b>
	
Definition	<p>a.The hatch area on Module PCBA should keep at least 1mm gap(X,Y,Z direction) to any structure with system cover inner surface.</p> <p>b.Burr, Step, PCB protrusion may cause stress concentration. White spot may occur during reliability test.</p>

4	<b>Material used for system rear-cover</b>
	
Definition	<p>System rear-cover material with high rigidity is needed to resist deformation during scuffing test, hinge test, pogo test or backpack test. Abnormal display, white spot, pooling issue may occur if low rigidity material is used. Pooling issue may occur because screw's boss position for module's bracket are deformed open-close test. Solid structure design of system rear-cover may also influence the rigidity of system rear-cover. The deformation of system rear-cover should not caused interference.</p>

5	Assembly SOP examination for system front-cover with hook structure
 <p>The diagram illustrates the correct and incorrect ways to assemble the system front-cover. A green 'Module' is shown being inserted into a blue 'System front-cover' which has a 'hook' on its side. The 'System rear-cover' is shown below. Arrows indicate the direction of assembly: a red circle with a yellow arrow pointing down (prohibited) and a green circle with a yellow arrow pointing down (recommended) for the front-cover, and a red circle with a yellow arrow pointing up (prohibited) and a green circle with a yellow arrow pointing up (recommended) for the rear-cover.</p>	
Definition	To prevent panel crack during system front-cover assembly process with hook structure, it is not recommended to press panel or any location that relate directly to the panel.

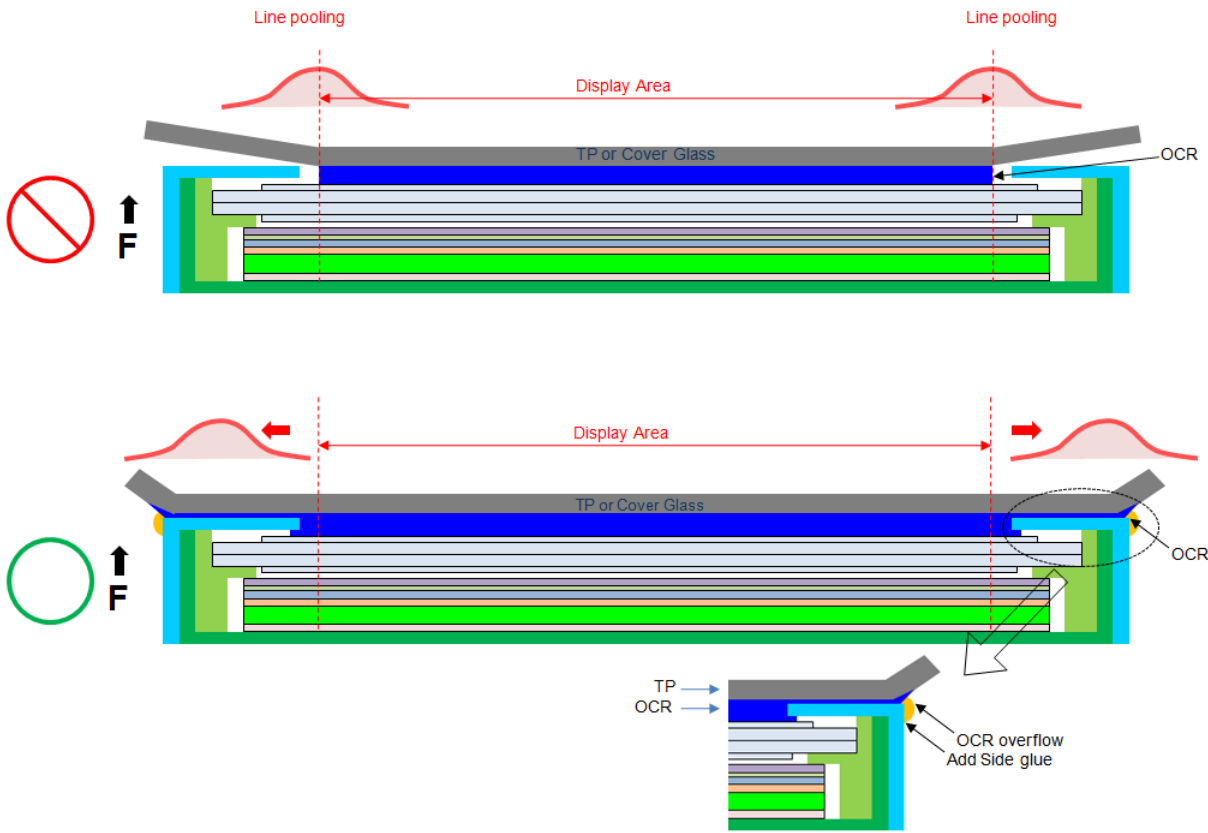

6	Permanent deformation of system cover after reliability test
<div data-bbox="284 338 371 427">○</div> <div data-bbox="292 573 363 663">✗</div> <div data-bbox="284 741 371 831">○</div> <div data-bbox="292 943 363 1032">✗</div> <div data-bbox="292 1111 363 1200">✗</div> <div data-bbox="292 1290 363 1379">✗</div>	 <p>The diagrams illustrate various failure modes of system covers after reliability testing. Each diagram shows a green 'Module' between a blue 'System front-cover' and a cyan 'System rear-cover'.  - The first diagram (marked with a blue circle) shows a correct fit with no deformation.  - The second diagram (marked with a red 'X') shows the front cover deformed upwards, labeled 'deformation'.  - The third diagram (marked with a blue circle) shows a correct fit with no deformation.  - The fourth diagram (marked with a red 'X') shows the front cover deformed downwards, labeled 'deformation'.  - The fifth diagram (marked with a red 'X') shows a '0 gap' between the module and the front cover.  - The sixth diagram (marked with a red 'X') shows the rear cover deformed upwards, labeled 'deformation'.</p>
Definition	<p>System cover including front cover and rear cover may deform during reliability test. Permanent deformation of system front cover and rear cover after reliability test should not interfere with panel. Because it may cause issue such as pooling, abnormal display, white spot and also cell crack.</p> <p>Note: If the interference cannot be avoided, please feel free to contract INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>

7	<b>Design gap A between panel &amp; any components on system rear-cover</b>
	
Definition	<p>System cover including front cover and rear cover may deform during reliability test. Permanent deformation of system front cover and rear cover after reliability test should not interfere with panel. Because it may cause issue such as pooling, abnormal display, white spot and also cell creak.</p> <p>Note: If the interference cannot be avoided, please feel free to contract INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>
8	<b>Design gap B between system front-cover &amp; panel surface</b>
	
Definition	<p>Gap between system front-cover &amp; panel surface is needed to prevent pooling or glass broken. Zero gap or interference such as burr and warpage from mold frame may cause pooling issue near system front-cover opening edge. This phenomenon is obvious during swing test, hinge test, knock test or during pooling inspection procedure. To remain sufficient gap, design with system rib higher than maximum panel thickness is recommended.</p> <p>Note: If the interference cannot be avoided, please feel free to contract INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>

9	Design gap C between panel & system front-cover or protrusions
	 <p>The diagrams illustrate the required gap 'C' between the module and the system front-cover or protrusions. In both cases, the gap is defined as the distance between the module and the front-cover/protrusion, labeled 'C' in a blue box. The top diagram shows the module between the rear-cover and front-cover, while the bottom diagram shows the module between the rear-cover and a protrusion. Labels include 'Module', 'System front-cover', and 'System rear-cover'.</p>
Definition	<p>Gap between panel &amp; system front-cover or protrusions is needed to prevent shock test failure. Because system front-cover or protrusions with small gap may hit panel during the test. Issue such as cell crack, abnormal display may occur.</p> <p>The gap should be large enough to absorb the maximum displacement during the test.</p> <p>Note: If the interference cannot be avoided, please feel free to contract INX FAE Engineer for collaboration design. We can help to verify and pass risk assessment for customer reference.</p>

10	Design distance between TP AA to LCD AA
<p>The diagram illustrates the cross-section of a display module. Key components and their relative positions are as follows:</p> <ul style="list-style-type: none"> <li><b>TP (Touch Panel):</b> A grey layer at the top.</li> <li><b>TP VA (Touch Panel Vibration Absorption):</b> A thin layer on the TP.</li> <li><b>TP INK:</b> A black layer on the TP VA.</li> <li><b>Sponge:</b> A blue layer below the TP INK.</li> <li><b>MODULE Frame:</b> A green L-shaped frame surrounding the display area.</li> <li><b>LCD AA (Active Area):</b> Indicated by a red dashed line on the left.</li> <li><b>TP VA:</b> Indicated by a red dashed line in the middle.</li> <li><b>MODULE Frame Opening:</b> Indicated by a red dashed line on the right.</li> </ul> <p>Red arrows and dashed lines define the design distances:</p> <ul style="list-style-type: none"> <li>A double-headed arrow between the LCD AA and TP VA lines.</li> <li>A double-headed arrow between the TP VA and MODULE Frame Opening lines.</li> </ul>	
Definition	TP VA should avoid TP ink area covering LCD AA or causing the module frame to be exposed.

11	Use OCR Lamination
	 <p>The diagram illustrates the correct use of OCR lamination to avoid line pooling. It shows two cross-sectional views of a display module. The top view, marked with a red 'X' and a red circle with a diagonal line, shows 'Line pooling' occurring at the edges of the 'Display Area'. The bottom view, marked with a green circle and an upward arrow labeled 'F', shows the correct application of 'OCR' (Optical Clear Resin) lamination, which prevents line pooling. A detailed inset shows the 'OCR overflow' and 'Add Side glue' process, where the OCR is applied to the edges of the 'TP or Cover Glass' and the 'OCR' layer is added to the side of the module.</p>
Definition	<p>1. OCR glue as possible beyond module, in order to avoid Line Pooling</p> <p>2. Add side glue to avoid Line Pooling</p>
