

1 FEATURES

- It can be powered by a 3V to 5.5V V_{CC} supply
- Operates up to 1Mbps
- Two Drivers and Two Receivers
- Meets the Requirements of TIA/EIA-232-F and ITU V.28 standard
- External Capacitors: 4 x 0.1 μ F
- Serial pins provide enhanced ESD protection

2 APPLICATIONS

- Industrial PC
- Wired network
- Data center and enterprise computing
- Notebook, Computers
- Handheld device

3 DESCRIPTION

The GM3232H interface chip consists of two-channel drivers, two-channel receivers, and a dual charge-pump circuit. The serial port has $\pm 15\text{kV}$ IEC ESD protection. The GM3232H meets the requirements of TIA/EIA-232-F and provides the electrical interface function between an asynchronous communication controller and a serial-port connector. The internal charge pump of the chip and four small external capacitors support a single power supply of 3V to 5.5V. The GM3232H supports a data signaling rate of up to 1Mbit/s.

9 TYPICAL OPERATING CHARACTERISTICS

9.1 DESCRIPTION

The GM3232H interface chip comprises two drivers, two receivers, and a dual charge-pump circuit. The serial port has an ESD protection level of ±15kV according to IEC61000-4-2. The GM3232H meets the requirements of TIA/EIA-232-F and provides an electrical interface function between an asynchronous communication controller and a serial port connector. The internal charge pump of the chip and four small external capacitors support a single power supply ranging from 3V to 5.5V. The GM3232H supports a data signaling rate of up to 1Mbit/s, and the maximum slew rate of the driver output is 150V/μs. The output ports of the chip are equipped with short-circuit protection to ground.

9.2 POWER SUPPLY

The GM3232H internally integrates a dual charge-pump circuit to provide positive and negative voltages. The positive and negative voltages generated by the charge pump are available at the V+ and V- pins of the chip respectively. This charge pump requires four off-chip capacitors to operate properly.

9.3 RS232 DRIVER

When the input level of the driver, DIN, is a valid high or low level, the driver will convert the TTL/CMOS standard logic level into the RS232 level that meets the requirements of TIA/EIA-232-F.

9.4 RS232 RECEIVER

The two receivers of GM3232H can convert the RS232 level into the standard logic output level. If the receiver input is open-circuit, the receiver output ROUT is at a high level. The input terminal RIN of each receiver has a standard built-in RS232 load.

9.5 RS232 LOGICAL FUNCTION TABLE

The logic function tables of the driver and receiver of GM3232H are shown in [Table 1](#) and [Table 2](#) below (H=High level, L=Low level, Open=Input open circuit).

10 TYPICAL APPLICATION⁽⁴⁾

Figure 4 below shows a typical application of GM3232H. The ROUT and DIN pins are connected to the UART port or the common logic line, and the RIN and DOUT pins are connected to the RS232 connector port or the RS232 bus. In order to work properly, please refer to Table 3 to select the appropriate capacitor.

Figure 4. Typical Operating Circuit and Capacitor Values

4: Nonpolarized ceramic capacitors are acceptable. If polarized tantalum or electrolytic capacitors are used, they should be connected as shown.

Table 3. V_{CC} vs Capacitor Values

V _{CC}	C1	C2, C3, C4
3.3V±0.3V	0.1μF	0.1μF
5V±0.5V	0.047μF	0.33μF
3V to 5.5V	0.1μF	0.47μF

11 LAYOUT

Keep the external capacitor traces short. This is more important on C1 and C2 nodes that have the fastest rise and fall times.
