High Current IO+/- 1.0/1.2A 3-PHASE BRIDGE DRIVER

General Description

U5315-6T(Q) is a high-speed 3-phase gate driver for power MOSFET and IGBT devices with three independent high and low side referenced output channels. Built-in dead time protection and shoot-through protection prevent damage to the half-bridge. The UVLO circuits prevent malfunction when VCC and VBS are lower than the specified threshold voltage. A novel high-voltage BCD process and common-mode noise canceling technique provide stable operation of high-side drivers under high dV/dt noise conditions while achieving excellent negative transient voltage tolerance. low-PW consumption is included so that standby mode may be used to set the chip into a low quiescent current state to realize long battery lifetime.

Key Features

- Integrated DBOOT⁽¹⁾
- Floating channel designed for bootstrap operation
- Fully operational to +280 V
- Tolerant to negative transient voltage
- Gate drive supply range from 5V U5316T(Q) / 7.5V U5315T(Q) to 20V
- Independent 3 half-bridge drivers
- Low side output out of phase with inputs.
- High side outputs out of phase
- 3.3V logic compatible
- Lower di/dt gate drive for better noise immunity

Applications

- E-BIKE/electric power tool 3-phase motor driver
- Battery-powered mini/micro motor control
- General purpose inverter

Product Summary

V _{OFFSET}	280V max
I _{O+/-}	1.0 A / 1.2A
V _{CC}	5V/7.5V to 20V
t _{on/off} (typ.)	310 & 120ns
Work Tem	-40 ~125 °C

Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

Symbol	Definition		Min	Max	Units
VS	High side offset voltage		VB 1,2,3-25	VB 1,2,3+ 0.3	V
VB	High side floating supply voltage		-0.3	305	
VHO	High side floating output voltage		VS1,2,3 -0.3	VB 1,2,3+ 0.3	
VCC	Low side and logic fixed supply voltage		-0.3	25	
VLO1,2,3	Low side output voltage		-0.3	VCC+0.3	
VIN	Logic input voltage (HIN&LIN)		-0.3	VCC+0.3	
dV/dt	Allowable offset voltage slew rate		—	50	V/ns
PD	Package power dissipation @ TA≤+25 °C	TSSOP20	—	1.5	W
		QFN24	—	3.0	
RthJA	Thermal resistance, junction to ambient	TSSOP20	—	83	°C/W
		QFN24	—	40	
TJ	Junction temperature		—	150	°C
TS	Storage temperature		-55	150	
TL	Lead temperature (soldering, 10 seconds)		—	300	

Recommended Operating Conditions

The Input/Output logic timing diagram is shown in figure . For proper operation the device should be used within the recommended conditions. All voltage parameters are absolute referenced to COM. The VS offset rating is tested with all supplies biased at 15V differential.

Symbol	Definition		Min	Max	Units
VB1,2,3	High side floating supply voltage	U5316T(Q)	VS1,2,3+5	VS1,2,3+20	V
		U5315T(Q)	VS1,2,3+7.5	VS1,2,3+20	
VS1,2,3	High side floating supply offset voltage		-6(Note1)	200	
VHO1,2,3	High side output voltage		VS1,2,3	VB1,2,3	
VLO1,2,3	Low side output voltage		0	VCC	
VCC	Low side and logic fixed supply voltage	U5316T(Q)	5	20	
		U5315T(Q)	7.5	20	
VIN	Logic input voltage (HIN&LIN)		0	VCC	°C
TA	Ambient temperature		-40	125	

Note1: Logic operational for VS of -6V to +200V. Logic state held for VS of -6V to -VBS.

Electrical Characteristic

($V_{CC}-COM$)=(V_B-V_S)=15V. Ambient temperature $T_A=25^{\circ}C$ unless otherwise specified. The $V_{IN,TH}$, V_I , and I_{IN} parameters are referenced to COM and are applicable to all channels. The V_O and I_O parameters are referenced to COM and are applicable to the respective output leads. The V_{CCUV} parameters are referenced to, COM. The V_{BSUV} parameters are referenced to V_S .

Electrical Characteristic

(VCC-COM)=(VB-VS)=15V, VS1,2,3=COM, and Cload=1nF unless otherwise specified, ambient temperature TA=25°C.

Parameter	Symbol	Test Conditions	Min.	Typ.	Max.	Unit
Turn-on propagation delay	t_{on}	$V_{HIN1,2,3}$ or $V_{LIN1,2,3}=5V$, $V_{S1,2,3}=0$	-	380	-	ns
Turn-off propagation delay	t_{off}	$V_{HIN1,2,3}$ or $V_{LIN1,2,3}=0$, $V_{S1,2,3}=0$	-	180	-	
Turn-on rise time	t_r	$V_{HIN1,2,3}$ or $V_{LIN1,2,3}=5V$, $V_{S1,2,3}=0$	-	50	-	
Turn-off fall time	t_f	$V_{HIN1,2,3}$ or $V_{LIN1,2,3}=0$, $V_{S1,2,3}=0$	-	25	-	
Dead time	DT	$V_{HIN1,2,3}$ or $V_{LIN1,2,3}=0$ and 5V, without external dead time	-	200	250	
Dead time matching (all six channels)	MDT	without external dead time	-	-	50	
Delay matching (all six channels)	MT	external dead time > 1000ns	-	-	50	
Output pulse-width matching	PM	external dead time > 1000ns, $PW_{IN}=10\mu s$, $PM=PW_{OUT}-PW_{IN}$	-	-	50	

Low Side Power Supply: VCC

VCC is the low side supply and it provides power to both input logic and low side output power stage. The built-in under-voltage lockout circuit enables the device to operate at sufficient power when a typical VCC supply voltage higher than V_{CCUV+} is present, shown as Figure. 1. The U5315-6T(Q) shuts down all the gate driver outputs, when the VCC supply voltage is below V_{CCUV-} , shown as Figure. 1. This prevents the external power devices against extremely low gate voltage levels during on-state which may result in excessive power dissipation.

Figure. 1 VCC supply UVLO operating area

High Side Power Supply: VBS (VB1-VS1, VB2-VS2, VB3-VS3)

VBS is the high side supply voltage. The total high side circuitry may float with respect to COM following the external high side power device emitter/source voltage. Due to the internal low power consumption, the entire high side circuitry may be supplied by bootstrap topology connected to VCC, and it may be powered with small bootstrap capacitors. The device operating area as a function of the supply voltage is given in Figure. 2.

Figure. 2 VBS supply UVLO operating area

Low side And High Control Input Logic: HIN&LIN (HIN1, 2, 3/LIN1, 2, 3)

The Schmitt trigger threshold of each input is designed low enough to guarantee LSTTL and CMOS compatibility down to 3.3V controller outputs. Input Schmitt trigger and advanced noise filtering provide noise rejection of short input pulses. An internal pull-down resistor of about 220kΩ(positive logic) pre-biases each input during VCC supply start-up state. The minimum recommended input pulse-width is 300ns for proper operation of the driver.

Shoot- Through Prevention

The U5315-6T(Q) is equipped with shoot-through protection circuitry (also known as cross conduction prevention circuitry). Figure. 3 shows how this protection circuitry prevents both the high- and low-side switches from conducting at the same time. When the inputs controlling both high-side and low-side drivers are both logic HIGH, then both driver outputs are pulled down to logic LOW to shut down two power devices in the same bridge.

Figure. 3 Shoot-through prevention

Dead Time Protection

The U5315-6T(Q) features integrated fixed dead time protection circuitry. The dead time feature inserts a time period (a minimum dead time) in which both the high- and low-side power switches are held off. This is done to ensure that the power switch has fully turned off before the second power switch is turned on. This minimum dead time is automatically inserted whenever the external dead time is shorter than DT. External dead times larger than DT are not modified by the gate driver. Figure. 4 illustrates the dead time period and the relationship between the output gate signals.

Figure. 4 Dead time protection

Gate Driver (HO1, 2, 3/ LO1, 2, 3)

Low side and high side driver outputs are specifically designed for pulse operation and dedicated to drive power devices such as IGBT and power MOSFET. Low side outputs (i.e. LO1, 2, 3) are state triggered by the respective inputs, while high side outputs (i.e. HO1,2,3) are only changed at the edge of the respective inputs. After releasing from an under-voltage condition of the VBS supply, a new turn-on signal (edge) is necessary to activate the respective high side output. In contrast, after releasing from an under-voltage condition of the VCC supply, the low side outputs may directly switch to the state of their respective inputs without the additional constraints of the high side driver.
