TUDI-SN65ALS180/SN75ALS180

Low power RS-485 line driver and receiver pair

网址 www.sztdbdt.com

用芯智造·卓越品质

semiconductor device manufacturer

- Design
- research and development
- production
- and sales

Features

- Complies with or exceeds requirements of TIA/EIA-422 , TIA/EIA-485
- High-speed advanced low-power Schottky circuitry
- Designed for 25Mbaud operation in both serial and parallel applications
- Low device--device delay: 6ns (max)
- Low power supply current requirement: 30 mA (max)
- Independent drivers and receivers with separate I/ pins for dual VCC and dual GND
- Wide ±input/output bus voltage range
- Driver output capability: ±60mA
- Driver current limiting
- iver input impedance: 12k minimum
- Receiver input sensitivity: ±200mV (max)
- Receiver input hysteresis: 6 mV (typ)
- Operates from a single 5V power supply

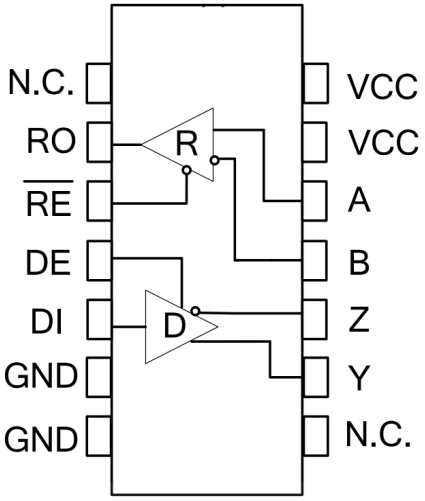

Figure 1 Pin diagram

Description

The SN65ALS180 and SN75ALS180 differential driver and receiver pairs are integrated circuits designed for bidirectional data on multipoint bus transmission lines. These devices are designed for balanced transmission lines and comply with TIA/EIA-422, TIA/EIA-485.

The SN65ALS180 and SN75ALS180 integrate a three-state differential line driver and a differential input line receiver, both powered by single 5V supply. The driver and receiver have separate high-level and low-level active enable inputs, which can be connected together externally to function as direction control. The differential outputs and the receiver differential inputs are connected to separate termination to achieve greater flexibility, and these ports are used to provide a minimum load to the bus when the driver is disabled orCC = 0.

These ports have a positive and negative wide common mode voltage range, making the device well suited for common mode applications

Pin description

Pin number	Pin name	Pin function
1	NC	No internal connections required
2	RO	Receiver output.When RE is low,the RO output is high if A-B is ≥-10mV,and low if A-B is≤-200mV.
3	/RE	Receiver output enable control.When/RE is low,the receiver output is enabled and RO is active;when/REis high,the receiver output is disabled and RO is in high-impedance state.When RE is at a high level and DE is at a low level,the device enters low-power shutdown mode
4	DE	The driver output enables the control.When DE is at high level, the driver outputs effectively;when DE is low,it outputs high-impedance state.When/RE is high and DE is low,the device enters low-power shutdown mode.
5	DI	DI driver input.When DE is high,the low level on DI makes the in-phase output A of the driver low and the in-phase output B high;the high levelon DI makes the in-phase output high and the in-phase output Blow.
6	GND	Landing
7	GND	Landing
8	NC	No internal connections required
9	Y	Driver in-phase output terminal
10	Z	Driver inverting output
11	B	Receiver inverting input
12	A	Receiver in phase input
13	VCC	This pin can be connected to power or left unconnec-ted
14	VCC	Power connection

Extreme parameter

Parameter	Symbol	Unit	size
Continuous power consumption	SOP14	mW	600
	DIP14	mW	700
Power supply voltage	VCC	V	+7
working temperature range		℃	-40~125
Storage temperature range		℃	-60~150
Welding temperature range		℃	300
Control port voltage	DI	V	-0.3~VCC+0.3
Bus side input voltage	A、B	V	-8~13
Receiver output voltage	RO	V	-0.3~VCC+0.3

The maximum limit parameters are values beyond which the device can be damaged in an irreversible manner. Operation of the device under these conditions is not intended to be normal and may affect the reliability of the device if operated continuously at the maximum rated limit. All voltages are referenced to ground.

Additional description

Introduction

The ALS180 is a full-duplex high-speed transceiver for RS-485/RS-42 communication,containing a driver and a receiver.It has fail-safe,overvoltage protection,and overcurrent protection.The ALS180 achieves error-free transmission up to 12Mbps.

fail-safe

The ALS180 guarantees a logic high receiver output if the receiver input is short-circuited or open-circuited,or drivers connected to the terminated transmission line are disabled (idle).This is achieved by setting the receiver input thresholds to -10mV and -20mV, respectively.RO is logic high if the differential receiver input voltage(A-B)≥-10mV,and RO is logic low the voltage(A-B)≤-200mV.Logic high with a minimum noise margin of 50mV can be realized depending the receiver thresholds.The-10mV to -200mV threshold voltage is in accordance with the EIA/TIA-485 of±200mV.

256 transceivers on the bus

The input impedance of the standard RS485 receiver is 12kΩ(1 unit load),and the standard driver can drive to 32 unit loads.The receiver of the ALS180 transceiver has an input impedance of 1/8 unit load (96kΩ,allowing up to 256 transceivers to be connected in parallel on the samecommunication bus.These devices can be combined arbitrarily,or combined with other485 transceivers,as long as the total load does not exceed 256 unit loads,they can be connected to the same bus.

Drive output protection

Protection against excessive output current and dissipation by fault or bus contention is provided by overcurrent and overvoltage protection mechanisms,with fast short-circuit throughout the common-mode voltage range(see Typical Operating Characteristics).

Important statement:

●TUDI Semiconductor reserves the right to modify the product manual without prior notice! Before placing an order, customers need to confirm whether the obtained information is the latest version and verify the completeness of the relevant information.

●Any semi-guide product is subject to failure or malfunction under specified conditions. It is the buyer's responsibility to comply with safety standards when using TUDI Semiconductor products for system design and whole machine manufacturing.And take the appropriate safety measures to avoid the potential in the risk of loss of personal injury or loss of property situation!

●TUDI Semiconductor products have not been licensed for life support, military, and aerospace applications,and therefore TUDI Semiconductor is not responsible for any consequences arising from the use of this product in these areas.

●If any or all TUDI Semiconductor products (including technical data, services) described or contained in this document are subject to any applicable local export control laws and regulations, they may not be exported without an export license from the relevant authorities in accordance with such laws.

●The specifications of any and all TUDI Semiconductor products described or contained in this document specify the performance, characteristics, and functionality of said products in their standalone state, but do not guarantee the performance, characteristics, and functionality of said products installed in Customer's products or equipment. In order to verify symptoms and conditions that cannot be evaluated in a standalone device, the Customer should ultimately evaluate and test the device installed in the Customer's product device.

●TUDI Semiconductor documentation is only allowed to be copied without any alteration of the content and with the relevant authorization.TUDI Semiconductor assumes no responsibility or liability for altered documents.

●TUDI Semiconductor is committed to becoming the preferred semiconductor brand for customers, and TUDI Semiconductor will strive to provide customers with better performance and better quallity products.
