● Vocabulary

- I_{hold} = Hold current: maximum current device will pass without tripping in 25°C still air.
 - I_{trip} = Trip current: minimum current at which the device will trip in 25°C still air.
 - V_{max} = Maximum voltage device can withstand without damage at rated current (I_{max}).
 - I_{max} = Maximum fault current device can withstand without damage at rated voltage (V_{max}).
 - $P_{d\ typ}$ = Typical power dissipated from device when in the tripped state at 25°C still air.
 - $R_{i\ min}$ = Minimum resistance of device in initial (un-soldered) state.
 - $R_{1\ max}$ = Maximum resistance of device at 25°C measured one hour after tripping or reflow soldering of 260°C for 20 sec.
- Caution: Operation beyond the specified ratings may result in damage and possible arcing and flame.

● Warning

- Users shall independently assess the suitability of these devices for each of their applications.
- Operation of these devices beyond the stated maximum ratings could result in damage to the devices and lead to electrical arcing and/or fire.
- These devices are intended to protect against the effects of temporary over-current or over-temperature conditions and are not intended to perform as protective devices where such conditions are expected to be repetitive or prolonged in duration.
- Exposure to silicon-based oils, solvents, electrolytes, acids, and similar materials can adversely affect the prolonged of these PPTC devices.
- These devices undergo thermal expansion under fault conditions, and thus shall be provided with adequate space and be protected against mechanical stresses.
- Circuits with inductance may generate a voltage ($L di/dt$) above the rated voltage of the PPTC device.
