Features

- 4.5V~5.5V power supply, RS485/RS422 full-duplex communication;
- Fail-Safe function;
- 1/8 unit load, allowing up to 256 devices to be connected to the bus;
- Short-circuit output for the driver;
- Receiver open-circuit fail-safe protection;
- Strong anti-noise capability;
- Integrated transient voltage suppression function;
- Data rate in an electrical noise environment can reach 2.5Mbps;
- A, B port protection: $HBM \pm 15KV$;

Pin diagram

Description

The MAX491 is a low-power transceiver for RS-422 communication. Each device contains a driver and a receiver. The MAX491 driver has an unrestricted conversion rate, allowing them to transmit up to 2.5Mbps.

These transceivers consume supply current between 10 μ A and 500 μ A, when idle or fully loaded with the driver disabled. All devices operate from a single 5V supply. The drivers have shortcircuit current limiting and are protected by a thermal shutdown circuit that places the driver output into a high-impedance state to prevent excessive power dissipation. The receiver inputs have a fail-safe feature that guarantees the output to be logic high if the input is open. The MAX491 has a receiver input impedance of one-eighth unit load, allowing maximum of 256 transceivers to be connected to a bus. The MAX491 is full duplex communication.

Applications

- Low-Power RS-485/RS-422 Transceivers
- Level Translators Transceivers for EMI-Sensitive Applications
- Industrial-Control Local Area Networks

Pin description

Pin number	Pin name	Pin function
1	NC	No internal connections required
2	RO	Receiver output.When RE is low,the RO output is high if A-B is -10mV ,and low if A-B is -200mV .
3	/RE	Receiver output enable control.When /RE is low,the receiver output is enabled and RO is active;when /RE is high,the receiver output is disabled and RO is in high-impedance state.When RE is at a high level and DE is at a low level,the device enters low-power shutdown mode
4	DE	The driver output enables the control.When DE is at high level, the driver outputs effectively;when DE is low,it outputs high-impedance state.When /RE is high and DE is low,the device enters low-power shutdown mode.
5	DI	DI driver input.When DE is high,the low level on DI makes the in-phase output A of the driver low and the in-phase output B high;the high level on DI makes the in-phase output high and the in-phase output B low.
6	GND	Landing
7	GND	Landing
8	NC	No internal connections required
9	Y	Driver in-phase output terminal
10	Z	Driver inverting output
11	B	Receiver inverting input
12	A	Receiver in phase input
13	VCC	This pin can be connected to power or left unconnected
14	VCC	Power connection

Extreme parameter

Parameter	Symbol	Unit	size
Continuous power consumption	SOP14	mW	600
	DIP14	mW	700
Power supply voltage	VCC	V	+7
working temperature range			-40~125
Storage temperature range			-60~150
Welding temperature range			300
Control port voltage	DI	V	-0.3~VCC+0.3
Bus side input voltage	A、B	V	-8~13
Receiver output voltage	RO	V	-0.3~VCC+0.3

The maximum limit parameters are values beyond which the device can be damaged in an irreversible manner. Operation of the device under these conditions is not intended to be normal and may affect the reliability of the device if operated continuously at the maximum rated limit. All voltages are referenced to ground.

ESD Protect						
Parameter	symbol	Test condition	Minimum	Typical case	Maximum	Unit
A、B、Y、Z		Human bodymodel		±15		KV
Other ports		Human bodymodel		±6		KV

Receiver Switching Characteristics

Parameter	symbol	Test condition	Minimum	Typical case	Maximum	Unit
Acceptor	tRPLH	See Figure 7 and Figure 8	20	60	90	ns
Input to output propagation delay from low to high		V _I = 2.0V; rising and falling edge time V _{ID} = 15ns				
The propagation delay from receiver input to output is from high to low	tRPHL		20	60	90	ns
tRPLH-tRPHL	tsKEW2			7	10	ns
Enable low time out	tRPZL	CL=15pF See Figures 7 and 8		20	50	ns
Enable to output high time	tRPZH	CL=15pF See Figures 7 and 8		20	50	ns
Time from output low to disable	tpRLZ	CL=15pF See Figures 7 and 8		20	45	ns
Time from output high to disable	tpRHZ	CL=15pF See Figures 7 and 8		20	45	ns
Off state Enable to output high time	tRPSH	CL=15pF See Figures 7 and 8		200	1400	ns
Off state Enable low time out	tRPSL	CL=15pF See Figures 7 and 8		200	1400	ns
Time to turn off	tsHDN	NOTE2	80		300	ns

(If not otherwise, VCC=3V~5.5V, Temp = TMIN ~ TMAX, typical value at Temp = 25) NOTE 1: V_{OD} and V_{OC} is the change in V_{OD} and V_{OC} amplitude caused when the DI state of the input signal changes, respectively.

DC electrical characteristics of the driver

Parameter	symbol	Test condition	Minimum	Typical case	Maximum	Unit
Driver differential output (non-loaded)	VoD ₁			4.5	VCC	V
Drive differential output	VoD ₂	graph 2, RL=27	1.5	2.3	VCC	V
		graph 2, RL=50	2	2.8	VCC	
Variation in the amplitude of the output voltage (NOTE1)	VoD	graph 2, RL=27			0.2	V
Output common mode voltage	Voc	graph 2, RL=27			3	V
Amplitude Variation of Common Mode Output Voltage(NOTE1)	Voc	graph 2, RL=27			0.2	V
High-level input	VH	DI	2.0			V

0	0	X	Z	Z
1	0	X	Z(shutdown)	
X: any level; Z: high impedance.				

Additional description

Introduction

The 491 is a full-duplex high-speed transceiver for RS-485/RS-42 communication, containing a driver and a receiver. It has fail-safe, overvoltage protection, and overcurrent protection. The TUDI-MAX491 achieves error-free transmission up to 2.5Mbps.

fail-safe

The 491 guarantees a logic high receiver output if the receiver input is short-circuited or open-circuited, or drivers connected to the terminated transmission line are disabled (idle). This is achieved by setting the receiver input thresholds to -10mV and -200mV , respectively. RO is logic high if the differential receiver input voltage $(A-B) \geq -10\text{mV}$, and RO is logic low if the voltage $(A-B) \leq -200\text{mV}$. Logic high with a minimum noise margin of 50mV can be realized depending on the receiver thresholds. The -10mV to -200mV threshold voltage is in accordance with the EIA/TIA-485 of $\pm 200\text{mV}$.

256 transceivers on the bus

The input impedance of the standard RS485 receiver is $12\text{k}\Omega$ (1 unit load), and the standard driver can drive to 32 unit loads. The receiver of the 491 transceiver has an input impedance of $1/8$ unit load ($96\text{k}\Omega$), allowing up to 256 transceivers to be connected in parallel on the same communication bus. These devices can be combined arbitrarily, or combined with other 485 transceivers, as long as the total load does not exceed 256 unit loads, they can be connected to the same bus.

Drive output protection

Protection against excessive output current and dissipation by fault or bus contention is provided by overcurrent and overvoltage protection mechanisms, with fast short-circuit throughout the common-mode voltage range (see Typical Operating Characteristics).

Important statement:

- TUDI Semiconductor reserves the right to modify the product manual without prior notice! Before placing an order, customers need to confirm whether the obtained information is the latest version and verify the completeness of the relevant information.
- Any semi-guide product is subject to failure or malfunction under specified conditions. It is the buyer's responsibility to comply with safety standards when using TUDI Semiconductor products for system design and whole machine manufacturing. And take the appropriate safety measures to avoid the potential in the risk of loss of personal injury or loss of property situation!
- TUDI Semiconductor products have not been licensed for life support, military, and aerospace applications, and therefore TUDI Semiconductor is not responsible for any consequences arising from the use of this product in these areas.
- If any or all TUDI Semiconductor products (including technical data, services) described or contained in this document are subject to any applicable local export control laws and regulations, they may not be exported without an export license from the relevant authorities in accordance with such laws.
- The specifications of any and all TUDI Semiconductor products described or contained in this document specify the performance, characteristics, and functionality of said products in their standalone state, but do not guarantee the performance, characteristics, and functionality of said products installed in Customer's products or equipment. In order to verify symptoms and conditions that cannot be evaluated in a standalone device, the Customer should ultimately evaluate and test the device installed in the Customer's product device.
- TUDI Semiconductor documentation is only allowed to be copied without any alteration of the content and with the relevant authorization. TUDI Semiconductor assumes no responsibility or liability for altered documents.
- TUDI Semiconductor is committed to becoming the preferred semiconductor brand for customers, and TUDI Semiconductor will strive to provide customers with better performance and better quality products.
