UMW MCP1702T-xxxxE

250 mA Low Quiescent Current LDO Regulator

1.Description

MCP1702T-xxxxE series is a positive voltage regulator circuit with low voltage difference, high precision output voltage and ultra-low power consumption current developed by practical CMOS technology.Due to the built-in low on state resistance transistor, so the output voltage difference is low, and it has high input voltage bearing capacity. The maximum working voltage can reach 14V, which is suitable for the application circuit requiring high voltage withstand.

2.Features

- High accuracy of output voltage: accuracy ± 2%
- Ultra low power consumption current: typical value 3ua
- Low output voltage temperature drift: 50 ppm /°C
- High input withstand voltage: increase to 14V and keep output voltage stable

3.Product use

- Regulated power supply using battery powered equipment
- Stabilized power supply for portable medical instruments
- Stabilized power supply for toys
- Stabilized power supply of communication equipment
- Regulated power supply for mobile phone
