用芯智造 · 卓越品质

**semiconductor device
manufacturer**

- Design
- research and development
- production
- and sales

Features

- Full-duplex RS-485 and RS-422 transceivers
- Operates from a single 3.3V supply
- Interoperable with 5.0V logic
- Driver/receiver tri-state enable lines
- -7V to 12V common-mode input voltage range
- $\pm 200\text{mV}$ receiver input sensitivity
- Allows up to 32 transceivers on the serial bus

Figure 1 3491 Pin diagram

Description

SP3491 is a wide-range power supply, full-duplex, low-power RS-485 trans that fully meets the requirements of TIA/EIA-485 standard.

SP3491 includes a driver and a receiver, both which can independently transmit signals. SP3491 has a load of 1/8, allowing 32 transceivers to be connected in parallel on the same communication bus. Data transmission without errors can be achieved at rates up to 10Mbps. SP3491 has a working voltage range of 3~5.5V, with fail-safe, current limiting protection, overvoltage protection control port hot plug input and other functions. SP3491 has excellent ESD discharge capability, with HBM reaching $\pm 15\text{KV}$. The SP3491 has a high-level-active driver enable input and a low-level-active receiver enable input. All are rated for an ambient temperature range of -40°C to 85°C .

Function table

Receiving function table			
control		input	output
/RE	DE	A-B	RO
0	X	$\geq -10\text{mV}$	H
0	X	$\leq -200\text{mV}$	L
0	X	Open/short circuit	H
1	X	X	Z
X: any level; Z: high impedance.			

Send function table				
control		input	output	
/RE	DE	DI	Y	Z
X	1	1	H	L
X	1	0	L	H
0	0	X	Z	Z
1	0	X	Z(shutdown)	
X: any level; Z: high impedance.				

Pin description

Pin number	Pin name	Pin function
1	NC	No internal connection, no need to connect;
2	RO	Receiver output. When /RE is low, if $A-B \geq -10\text{mV}$, RO output is high; if $AB \leq -200\text{mV}$, RO output is low.
3	/RE	Receiver output enable control. When /RE is low, the receiver output is enabled and RO is valid; when /RE is high, the receiver is disabled and RO is high impedance; /RE is high and DE is low, the device enters low-power off mode.
4	DE	Driver output enable control. The driver output is active when DE is high, and the output is high-impedance when DE is low; / is high and DE is low, the device enters low-power shutdown mode.
5	DI	DI driver input. A low on DI with DE high causes the driver's A output to be low and B output to be high; a high DI will cause the A output to be high and the B output to be low.
6	GND	grounding
7	GND	grounding
8	NC	No internal connection, no need to connect;
9	Y	Drivers in-phase output
10	Z	Inverting output of the driver
11	B	Inverting input of the receiver
12	A	Receiver in-phase input terminal
13	VCC	This pin can be connected to the power supply ($3\text{V} \leq \text{VCC} \leq 5.5\text{V}$) or can be left unconnected
14	VCC	Power supply: $3\text{V} \leq \text{VCC} \leq 5.5\text{V}$

Extreme parameter

Parameter	Symbol	Unit	size
Continuous power consumption	SOP14	mW	600
	DIP14	mW	700
Power supply voltage	VCC	V	+7
working temperature range		°C	-40~125
Storage temperature range		°C	-60~150
Welding temperature range		°C	300
Control port voltage	DI	V	-0.3~VCC+0.3
Bus side input voltage	A, B	V	-8~13
Receiver output voltage	RO	V	-0.3~VCC+0.3

The maximum limit parameters are values beyond which the device can be damaged in an irreversible manner. Operation of the device under these conditions is not intended to be normal and may affect the reliability of the device if operated continuously at the maximum rated limit. All voltages are referenced to ground.

Parameter	Symbol	Test condition	Minimum	Typical case	Maximum	Unit
Supply current						
Supply current	I _{cc1}	/RE=0V,DE=0V		220	400	uA
	I _{cc2}	/RE=VCC,DE=		240	400	uA

Up along time / down along time	tDR,tDF			10	25	ns
Amission to output high	tpZH	RL =1109,(see Figure 5,6)		20	90	ns
The enabling to output is low	tpZL			20	90	ns
Input low to no energy	tPLz	RL =110 Ω , (see Figure		20	80	ns
Input high to no energy	tPHZ			20	80	ns
Under off conditions,the output is high	tDSH	RL =1109,(see Figure 5,6)		500	900	ns
Under off conditions,enabling output low	tDSL	RL=1109,(see Figure 5,6)		500	900	ns

Parameter	Symbol	Test condition	Minimum	Typical case	Maximum	Unit
Receiver Switch characteristics						
Ento output high time	tRPZH	C=15 pF is shown in Figure		20	50	ns
From low output to energy-forbidden time	tpRLZ	For CL =15 pF, see Figure 7		20	45	ns
From high output to energy forbidden time	tPRHZ	For CL =15 pF, see Figure 7		20	45	ns
Enables high output time in the off state	tRPSH	For CL =15 pF, see Figure 7		200	1400	ns
Ento output low time in off state	tRPSL	For CL =15 pF, see Figure 7		200	1400	ns
Time in the off state	tsHDN	NOTE2	80		300	ns
Acceptor	tRPLH	See Figure 7 and Figure 8	20	60	90	ns
Input to output propagation latency is from low to high		VID 2.0V;rise and fall along time VID 15ns				
The receiver input to output propagation latency is obtained from high to low	tRPHL		20	60	90	ns
tRPLH-tRPHL	tsKEW2			7	10	ns
Ability to reach the output for a low time	tRPZL	For CL =15 pF, see Figure 7		20	50	ns

Additional description

Introduction
The 3491 is a full-duplex high-speed transceiver for RS-485/RS-42 communication,containing a driver and a receiver.It has fail-safe, overvoltage protection,and overcurrent protection.The 3491 achieves error-free transmission up to 10Mbps.
fail-safe
The 3491 guarantees a logic high receiver output if the receiver input is short-circuited or open-circuited,or drivers connected to the terminated transmission line are disabled (idle).This is achieved by setting the receiver input thresholds to -10mV and -20mV, respectively.RO is logic high if the differential receiver input voltage(A-B)≥ -10mV,and RO is logic low the voltage(A-B)≤ -200mV.Logic high with a minimum noise margin of 50mV can be realized depending the receiver thresholds.The -10mV to -200mV threshold voltage is in accordance with the EIA/TIA-485 of±200mV.
32 transceivers on the bus
The input impedance of the standard RS485 receiver is 12k (1 unit load),and the standard driver can drive to 32 unit loads.The receiver of the 3491 transceiver has an input impedance of 1/8 unit load (96k ,allowing up to 32 transceivers to be connected in parallel on the samecommunication bus.These devices can be combined arbitrarily,or combined with other485 transceivers,as long as the total load does not exceed 256 unit loads,they can be connected to the same bus.
Drive output protection
Protection against excessive output current and dissipation by fault or bus contention is provided by overcurrent and overvoltage protection mechanisms,with fast short-circuit throughout the common-mode voltage range(see Typical Operating Characteristics).

Important statement:

- TUDI Semiconductor reserves the right to modify the product manual without prior notice! Before placing an order, customers need to confirm whether the obtained information is the latest version and verify the completeness of the relevant information.
- Any semi-guide product is subject to failure or malfunction under specified conditions. It is the buyer's responsibility to comply with safety standards when using TUDI Semiconductor products for system design and whole machine manufacturing. And take the appropriate safety measures to avoid the potential in the risk of loss of personal injury or loss of property situation!
- TUDI Semiconductor products have not been licensed for life support, military, and aerospace applications, and therefore TUDI Semiconductor is not responsible for any consequences arising from the use of this product in these areas.
- If any or all TUDI Semiconductor products (including technical data, services) described or contained in this document are subject to any applicable local export control laws and regulations, they may not be exported without an export license from the relevant authorities in accordance with such laws.
- The specifications of any and all TUDI Semiconductor products described or contained in this document specify the performance, characteristics, and functionality of said products in their standalone state, but do not guarantee the performance, characteristics, and functionality of said products installed in Customer's products or equipment. In order to verify symptoms and conditions that cannot be evaluated in a standalone device, the Customer should ultimately evaluate and test the device installed in the Customer's product device.
- TUDI Semiconductor documentation is only allowed to be copied without any alteration of the content and with the relevant authorization. TUDI Semiconductor assumes no responsibility or liability for altered documents.
- TUDI Semiconductor is committed to becoming the preferred semiconductor brand for customers, and TUDI Semiconductor will strive to provide customers with better performance and better quality products.
