

DESCRIPTION

The EV2236-J-00A Evaluation Board is designed to demonstrate the capabilities of MPS' MP2236, a fully-integrated high-frequency, synchronous rectified, step-down, switch-mode converter with internal power MOSFETs. It offers a very compact solution to achieve a 6A continuous output current over a wide input range, with excellent load and line regulation.

Constant On-Time control operation provides very fast transient response and easy loop design as well as very tight output regulation.

Full protection features include SCP, OCP, and thermal shutdown.

The MP2236 requires a minimal number of readily-available, standard, external components and is available in a space-saving 8 pin-TSOT23 package.
