Features

- Low Power: $I_{CC} = 300\mu A$ Typical
- Designed for RS485 or RS422 Applications
- Single 5V Supply
- $-7V$ to $12V$ Bus Common Mode Range Permits $\pm 7V$ Ground Difference Between Devices on the Bus
- Thermal Shutdown Protection
- Power-Up/-Down Glitch-Free Driver Outputs Permit Live Insertion or Removal of Package Driver Maintains High Impedance in Three-State or with the Power Off
- Combined Impedance of a Driver Output and Receiver Allows up to 32 Transceivers on the Bus
- $70mV$ Typical Input Hysteresis $28ns$ Typical Driver Propagation Delays with $5ns$ Skew for $2.5MB$ Operation

Pin diagram

Description

The 491 is a low power differential bus/line transceiver designed for multipoint data transmission standard RS485 applications with extended common mode range ($12V$ to $-7V$). It also meets the requirements of RS422.

The CMOS design offers significant power savings over its bipolar counterpart without sacrificing ruggedness against overload or ESD damage.

The driver and receiver feature three-state outputs, with the driver outputs maintaining high impedance over the entire common mode range. Excessive power dissipation caused by bus contention or faults is prevented by a thermal shutdown circuit which forces the driver outputs into a high impedance state.

The receiver has a fail safe feature which guarantees a high output state when the inputs are left open.

Both AC and DC specifications are guaranteed from $0^{\circ}C$ to $70^{\circ}C$ and $4.75V$ to $5.25V$ supply voltage range.

Applications

- Low Power RS485/RS422 Transceiver
- Level Translator

Pin description

Pin number	Pin name	Pin function
1	NC	No internal connections required
2	RO	Receiver output. When RE is low, the RO output is high if A-B is -10mV , and low if A-B is -200mV .
3	/RE	Receiver output enable control. When /RE is low, the receiver output is enabled and RO is active; when /RE is high, the receiver output is disabled and RO is in high-impedance state. When RE is at a high level and DE is at a low level, the device enters low-power shutdown mode
4	DE	The driver output enables the control. When DE is at high level, the driver outputs effectively; when DE is low, it outputs high-impedance state. When /RE is high and DE is low, the device enters low-power shutdown mode.
5	DI	DI driver input. When DE is high, the low level on DI makes the in-phase output A of the driver low and the in-phase output B high; the high level on DI makes the in-phase output high and the in-phase output B low.
6	GND	Landing
7	GND	Landing
8	NC	No internal connections required
9	Y	Driver in-phase output terminal
10	Z	Driver inverting output
11	B	Receiver inverting input
12	A	Receiver in phase input
13	VCC	This pin can be connected to power or left unconnected
14	VCC	Power connection

Extreme parameter

Parameter	Symbol	Unit	size
Continuous power consumption	SOP14	mW	600
	DIP14	mW	700
Power supply voltage	VCC	V	+7
working temperature range			-40~125
Storage temperature range			-60~150
Welding temperature range			300
Control port voltage	DI	V	-0.3~VCC+0.3
Bus side input voltage	A、B	V	-8~13
Receiver output voltage	RO	V	-0.3~VCC+0.3

The maximum limit parameters are values beyond which the device can be damaged in an irreversible manner. Operation of the device under these conditions is not intended to be normal and may affect the reliability of the device if operated continuously at the maximum rated limit. All voltages are referenced to ground.

Additional description

Introduction

The 491 is a full-duplex high-speed transceiver for RS-485/RS-42 communication, containing a driver and a receiver. It has fail-safe, overvoltage protection, and overcurrent protection. The TUDI-LTC491 achieves error-free transmission up to 12Mbps.

fail-safe

The 491 guarantees a logic high receiver output if the receiver input is short-circuited or open-circuited, or drivers connected to the terminated transmission line are disabled (idle). This is achieved by setting the receiver input thresholds to -10mV and -20mV , respectively. RO is logic high if the differential receiver input voltage $(A-B) \geq -10\text{mV}$, and RO is logic low if the voltage $(A-B) \leq -200\text{mV}$. Logic high with a minimum noise margin of 50mV can be realized depending on the receiver thresholds. The -10mV to -200mV threshold voltage is in accordance with the EIA/TIA-485 of $\pm 200\text{mV}$.

256 transceivers on the bus

The input impedance of the standard RS485 receiver is $12\text{k}\Omega$ (1 unit load), and the standard driver can drive to 32 unit loads. The receiver of the 491 transceiver has an input impedance of $1/8$ unit load ($96\text{k}\Omega$), allowing up to 256 transceivers to be connected in parallel on the same communication bus. These devices can be combined arbitrarily, or combined with other 485 transceivers, as long as the total load does not exceed 256 unit loads, they can be connected to the same bus.

Drive output protection

Protection against excessive output current and dissipation by fault or bus contention is provided by overcurrent and overvoltage protection mechanisms, with fast short-circuit throughout the common-mode voltage range (see Typical Operating Characteristics).

Important statement:

- TUDI Semiconductor reserves the right to modify the product manual without prior notice! Before placing an order, customers need to confirm whether the obtained information is the latest version and verify the completeness of the relevant information.
- Any semi-guide product is subject to failure or malfunction under specified conditions. It is the buyer's responsibility to comply with safety standards when using TUDI Semiconductor products for system design and whole machine manufacturing. And take the appropriate safety measures to avoid the potential in the risk of loss of personal injury or loss of property situation!
- TUDI Semiconductor products have not been licensed for life support, military, and aerospace applications, and therefore TUDI Semiconductor is not responsible for any consequences arising from the use of this product in these areas.
- If any or all TUDI Semiconductor products (including technical data, services) described or contained in this document are subject to any applicable local export control laws and regulations, they may not be exported without an export license from the relevant authorities in accordance with such laws.
- The specifications of any and all TUDI Semiconductor products described or contained in this document specify the performance, characteristics, and functionality of said products in their standalone state, but do not guarantee the performance, characteristics, and functionality of said products installed in Customer's products or equipment. In order to verify symptoms and conditions that cannot be evaluated in a standalone device, the Customer should ultimately evaluate and test the device installed in the Customer's product device.
- TUDI Semiconductor documentation is only allowed to be copied without any alteration of the content and with the relevant authorization. TUDI Semiconductor assumes no responsibility or liability for altered documents.
- TUDI Semiconductor is committed to becoming the preferred semiconductor brand for customers, and TUDI Semiconductor will strive to provide customers with better performance and better quality products.
