## MEMS Microphone

### 1. Introduction

The LMA3729T MEMS Microphones are integrated with specialized Pre-amplification ASIC to provide high sensitivity, high SNR output from a capacitive audio sensor. It's packaged for surface mounting and high temperature reflow assembly.

### 2. Electrical Characteristics

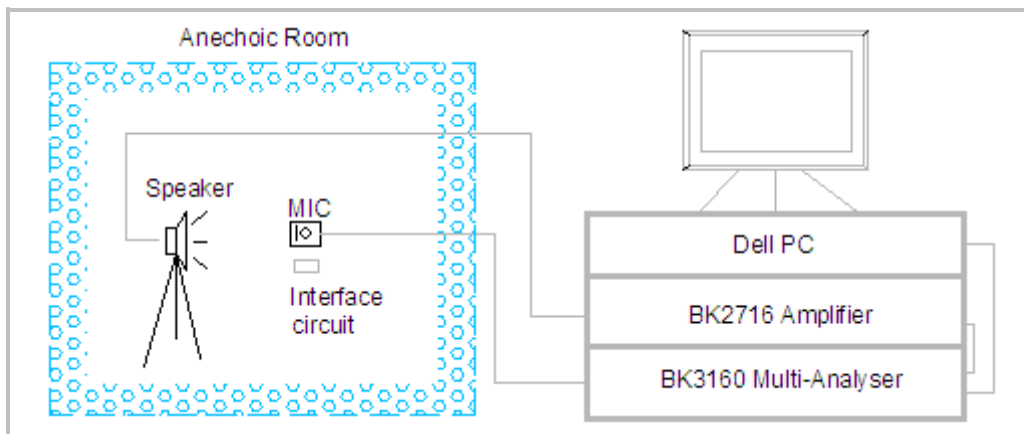

Test Condition:  $V_{DD}=2.0V$ ,  $23\pm 2^{\circ}C$ ,  $55\pm 10\%R.H.$ , unless otherwise specified.

Specification	Symbol	Test Conditions	Min.	Typ.	Max.	Unit
Directivity			Omni-directional			
Sensitivity Range	S	94dB SPL @1kHz	-39	-38	-37	dB
Output Impedance	$Z_{out}$	94dB SPL @1kHz			300	$\Omega$
Current Consumption	I			130		$\mu A$
S/N Ratio	SNR	94dB SPL @1kHz A-Weighted		65		dB(A)
Operating Voltage	$V_{DD}$		1.6	2.0	3.6	V
Total Harmonic Distortion	THD	94dB SPL @1kHz		0.1	0.5	%
Sensitivity Drop	$\Delta S$	94dB SPL @1kHz $V_{DD}=3.6V--1.6V$			0.5	dB
Acoustic Overload Point	AOP	10% THD @1kHz		128		dB SPL
Power Supply Rejection	PSR	100mVpp Square wave@217Hz, A-weighted		-100		dB

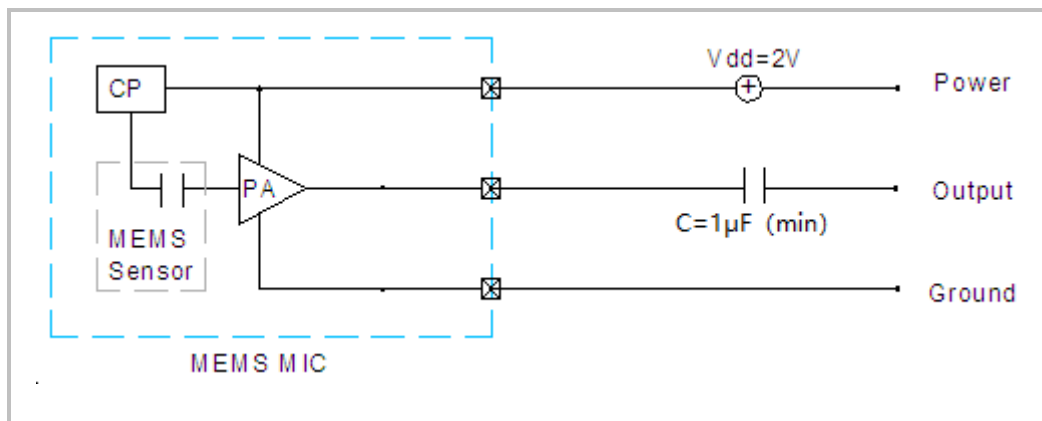

### 3. Frequency Response Curve

### 4. Test Setup (Sensitivity Test in Anechoic Room)

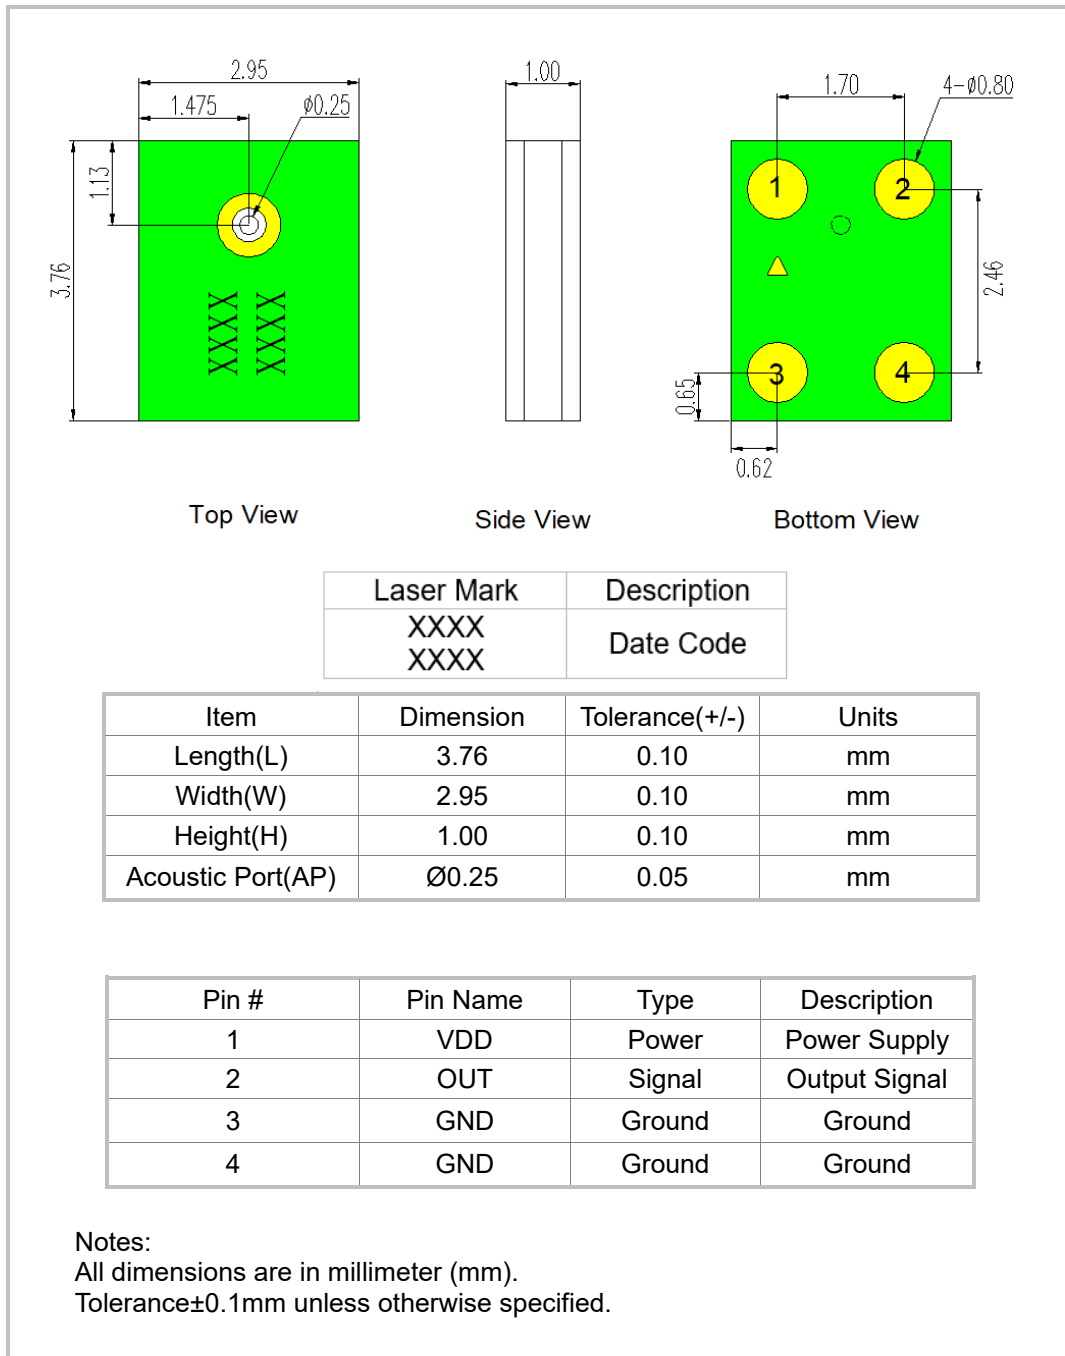

### 5. Measurement Circuit

## 6. Mechanical Characteristics

6.1 Weight: Less than 0.03g

6.2 Appearance Drawing(unit: mm)

## 7. Application

### 7.1 Pickup Tool Pick Location & PCB Solder Pad Layout

### 7.2 Recommended Reflow Process Condition

Recommend reflow profile, solder reflow  $\leq 260^{\circ}\text{C}$  (for 30s Max of peak temperature).

#### Important Notes

In order to minimize device damage:

1. Do not wash or clean the boards after the reflow process.
2. Do not apply the airflow which pressure over 0.3MPa blow into the port hole within a distance of less than 5 cm.
3. Do not exposed to ultrasonic processing or cleaning.
4. Do not pull a vacuum over port hole of the microphone.

### 7.3 Storage Condition

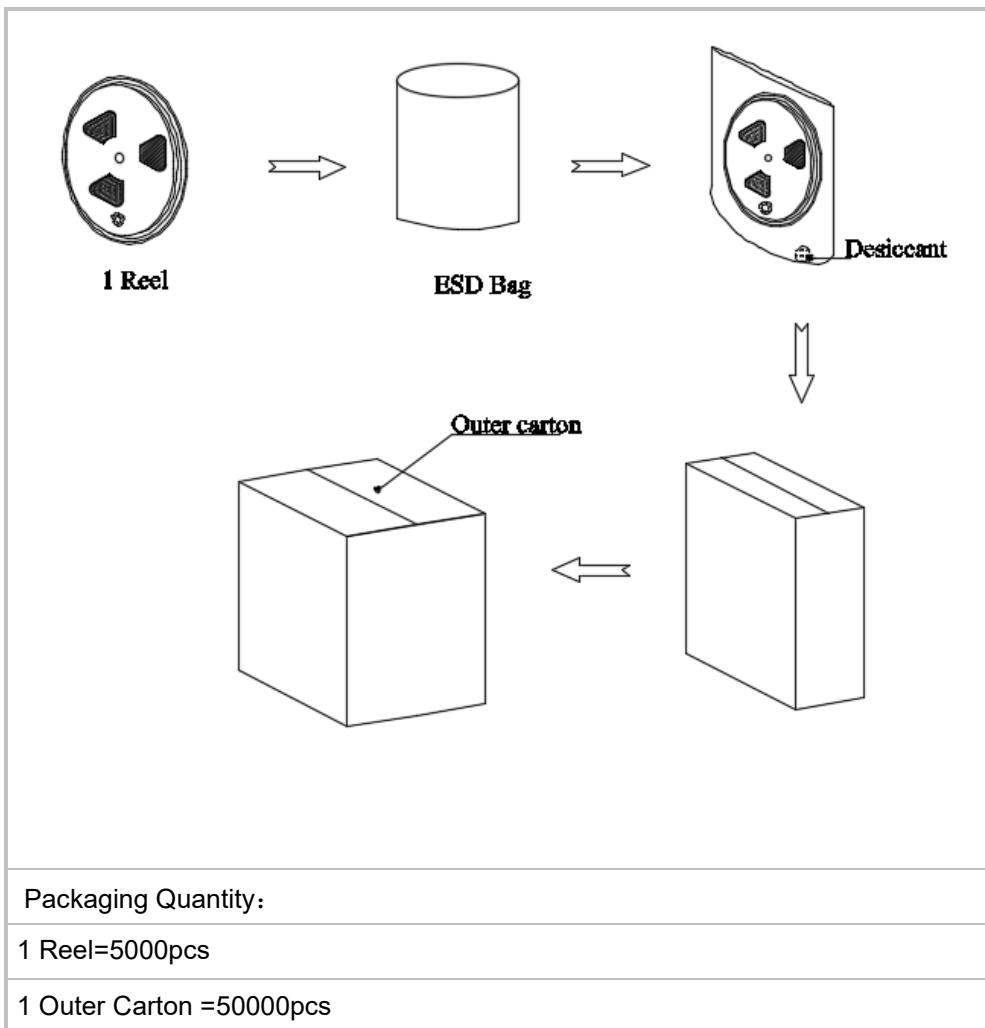

7.3.1 Storage temperature range: -40 $\sim$ +100 $^{\circ}\text{C}$ , and humidity is less than 75%.

7.3.2 Operating temperature range: -40 $\sim$ +85 $^{\circ}\text{C}$ .

7.3.3 MSL (moisture sensitivity Level) is Class 1.

8.2 Packaging Information

## 9. Reliability Test

The samples should be placed in the room with  $23\pm 2^{\circ}\text{C}$ ,  $55\pm 10\%\text{R.H.}$  for 2 hours at least before final measurement, unless otherwise specified.

Item	Detail	Standard
Simulated Reflow (Without Solder)	Samples for qualification testing require 3 times $260\pm 5^{\circ}\text{C}$ reflow solder profiles. 2 hours of setting time is required between each reflow profile test.	$\pm 3$ dB
Static Humidity	Precondition at $+25^{\circ}\text{C}$ for 1 hour. Then expose to $+85^{\circ}\text{C}$ with 85% relative humidity for 240 hours.	$\pm 3$ dB
Temperature Shock	Each cycle shall consist of 30 minutes at $-40^{\circ}\text{C}$ , 30 minutes at $+125^{\circ}\text{C}$ with 5 minutes transition time. Test duration is for 30 cycles, starting from cold to hot temperature.	$\pm 3$ dB
ESD Sensitivity	According to MIL-STD-883G, Method 3015.7 for Human Body Model. Discharge Position: I/O pins Charge Voltage: $\pm 2000\text{V}$ Discharge Network: $100\text{pF}$ & $1500\Omega$	$\pm 3$ dB
Random Vibrations	Vibrate randomly along three perpendicular directions for 30 minutes in each direction, 4 cycles from $20\text{Hz}$ ~ $2000\text{Hz}$ with a peak acceleration $20\text{g}$ .	$\pm 3$ dB
Mechanical Shock	Subject samples to half sine shock pulses ( $3000\text{g}\pm 15\%$ for $0.3\text{ms}$ ) in each direction, totally 18 shocks.	$\pm 3$ dB
High temperature Storage	Microphone unit must maintain sensitivity after storage at $+105^{\circ}\text{C}$ for 240 hours.	$\pm 3$ dB
Low temperature Storage	Microphone unit must maintain sensitivity after storage at $-40^{\circ}\text{C}$ for 240 hours.	$\pm 3$ dB
Drop Test	The test was repeated in six directions for 3 times, Dropped from 1.5m height on to a steel surface, total 18 times and inspected for mechanical damage.	$\pm 3$ dB
