• Notes

- 1.All test data is reference to 25℃ ambient.
- 2.Idc: DC current (A) that will cause an approximate ΔT of 40℃
3. Isat : DC current (A) that will cause L0 to drop approximately 30%
- 4.Operating Temperature Range -55℃ to +125℃
- 5.The part temperature (ambient + temp rise) should not exceed 125 ℃ under worse case operating conditions. Circuit design, component. PWB trace size and thickness airflow and other cooling provisions all affect the part temperature. Part temperature should be verified in the den application.
- 6.The rated current as listde is either the saturation current or the heating current depending on which value is lower.

• Application Notice

Storage Conditions To maintain the solderability of terminal electrodes:

1. Temperature and humidity conditions: Less than 30°C and 70% RH.
2. Recommended products should be used within 6 months form the time of delivery.
3. The packaging material should be kept where no chlorine or sulfur exists in the air.

Transportation

1. Products should be handled with care to avoid damage or contamination from perspiration and skin oils.
2. The use of tweezers or vacuum pick up is strongly recommended for individual components. Bulk handling should ensure that abrasion and mechanical shock are minimized.
