七、使用注意事项 Precautions for use

1、清洗 (clean)

当用化学品清洗胶体时必须特别小心，因为有些化学品对胶体表面有损伤并引起褪色，如三氯乙烯、丙酮等。可用乙醇擦拭、浸渍，时间在常温下不超过 3 分钟。

Special care must be taken when cleaning colloids with chemicals, as some chemicals can damage the surface of colloids and cause fading, such as trichloroethylene, acetone, etc. Can be wiped and soaked with ethanol for no more than 3 minutes at room temperature.

2、引脚装配 (Pin assembly)

- (1) 必需离胶体 2 毫米才能折弯支架。

It is necessary to be 2 millimeters away from the gel to bend the bracket.

- (2) 支架成形必须用夹具或由专业人员来完成。

The formation of the bracket must be completed using fixtures or by professionals

- (3) 支架成形必须在焊接前完成。

The bracket forming must be completed before welding

- (4) 支架成形需保证引脚和间距与线路板上一致。

The bracket forming needs to ensure that the pins and spacing are consistent with those on the circuit board

- (5) 焊接必须在正常温度下进行，当 LED 正常焊接到 PCB 板上后，应尽量避免在 LED 引脚处施加机械压力。

Welding must be carried out at normal temperature. When the LED is soldered to the PCB board normally, mechanical pressure should be avoided as much as possible at the LED pins

5、静电防护 (electrostatic protection) :

静电和电流的急剧升高将会对 LED 产生损害, KENTO 系列产品使用时请使用防静电装置, 如防护带和手套。

The sharp increase in static electricity and current will cause damage to LEDs. Please use anti-static devices such as protective belts and gloves when using KENTO series products.

注意: 使用时人体放电模式 $HBM < 1000V$; 机器放电模式 $< 100V$ 。

Attention: When using, the human body discharge mode HBM should be less than 1000V; Machine discharge mode $< 100V$.

6、LED 是电流驱动元件, 电压的细微变化会产生较大的电流波动, 导致元件遭到破坏。客户应使用电阻串联作限流保护

LED is a current driven component, and slight changes in voltage can cause significant current fluctuations, leading to damage to the component. Customers should use resistors in series for current limiting protection

7、过高的环境温度会影响 LED 的亮度以及其他性能, 所以为能使 LED 有较

Excessive environmental temperature can affect the brightness and other performance of LED, so in order to make LED more efficient

9、为了确保多颗 LED 并联使用时光色一致, 建议每条支路使用单独阻, 如下图模式 A 所示;

如采用下图模式 B 所示电路, LED 光色可能因每一颗 LED 不同的伏安特性而造成光色差异。

To ensure color consistency when multiple LEDs are used in parallel, it is recommended to use separate resistors for each branch, as shown in Mode A in the following figure;

If the circuit shown in pattern B is used, the color of LED may vary due to the different volt ampere characteristics of each LED.

电路模式 A

电路模式 B

10、高亮度 LED 产品点亮时可能会对人眼造成伤害, 应避免从正上方直视

High brightness LED products may cause harm to the human eye when lit up, and should be avoided from looking directly at them from above

11、本规格所描述的 LED 定义应用在普通的电子设备范围（例如办公设备、通讯设备等等）。如果有更为严苛的信赖度要求，特别是当元件失效或故障时可能会直接危害到生命和健康时（如航天、运输、交通、医疗器械、安全保护等等），请事先知会敝司业务人员

The LED definition described in this specification is applicable to ordinary electronic devices (such as office equipment, communication equipment, etc.). If there are stricter reliability requirements, especially when component failure or malfunction may directly endanger life and health (such as aerospace, transportation, traffic, medical equipment, safety protection, etc.), please inform our business personnel in advance

12、出于持续改善的目的，产品外观和参数规格可能会在没有预先通知的情况下作改良性变化

For the purpose of continuous improvement, the appearance and specifications of the product may undergo changes without prior notice
