### General Description

The families of products offer low voltage operation and rail-to-rail input and output, as well as excellent speed/power consumption ratio, providing an excellent bandwidth(10MHz) and slew rate (8.5V/ $\mu$ s). The operational amplifiers are unity gain stable and feature an ultra-low input bias current.

The has lower offset voltage, which is guaranteed not upper than 0.5mV at 25°C with  $V_s = 5V$ ,  $V_{CM} = V_s/2$ .

The families of operational amplifiers under single supplies of 2.1V to 5.5V or dual power supplies of  $\pm 1.05V$  to  $\pm 2.75V$ . The devices are ideal for sensor interfaces, active filters and portable applications.
