

SP485EENS

DATASHEET

Specification Revision History:

Version	Date	Description
V1.0	2019/02	New
V1.1	2021/06	Modify Ordering Information
V1.2	2025/02	Modify Ordering Information
V1.3	2025/03	Add application precautions and overall typesetting.

General Description

The SP485E is high-speed transceivers for RS-SP485 communication, which contain one driver and one receiver. The SP485 feature fail-safe circuitry, which guarantees a logic-high receiver output when the receiver inputs are open or shorted. This means that the receiver output will be a logic high if all transmitters on a terminated bus are disabled (high impedance). The SP485 driver slew rates are not limited, making transmit speeds up to 10Mbps possible. And this device has a 1/8-unit-load receiver input impedance that allows up to 256 transceivers on the bus.

Features

- ※ Fail-safe circuitry
- ※ Low power consumption
- ※ Up to 256 transceivers can be attached to the bus
- ※ Maximum transmission rate: 10Mbps(Vcc=5V)
- ※ ESD: $\geq \pm 15\text{KV}$
- ※ SOP8 Package

Applications

- ※ RS-485 Communications
- ※ Level Translators
- ※ Security Equipment
- ※ Industrial Control Equipment
- ※ Watt-hour meter

The appearance of the product

SOP-8

Ordering Information

Product Model	Package Type	Packing	Packing Qty
SP485EENS	SOP-8	REEL	2500PCS/REEL

Typical application circuit

Absolute Maximum Ratings (TA=25°C)

Supply Voltage(VCC).....	+7V	Receiver Input Voltage(A,B)	±13V
Operating voltage ¹	+3~5.5V	Receiver Output Voltage(RO).....	-0.3~Vcc+0.3V
Control Input Voltage(/RE,DE).....	-0.3~Vcc+0.3V	Operating Temperature (TOPR).....	-40°C~+85°C
DriverInput Voltage(DI).....	-0.3~Vcc+0.3V	Storage Temperature(TSTG).....	-65°C~+150°C
Driver Output Voltage(A,B).....	±13V		

Note 1:Recommended operating voltage is 5V,but can be compatible with 3V.If using a 3V or 3.3V supply voltage,please reduce the transmission rate.

DC Electrical Characteristics (VCC=5.0V,TA=25°C) ¹

PARAMETER	SYMBOL	CONDITIONS		MIN	TYP	MAX	UNITS

Receiver disable time	t_{LZ}, t_{HZ}	Figure2 and 8, $C_{RL}=15pF$	—	30	70	ns
Time to Shutdown	t_{SHDN}	—	—	230	800	ns

Note 1: All currents into the device are positive; all currents out of the device are negative. All voltages are referred to device ground unless otherwise noted.

Note 2: ΔV_{OD} and ΔV_{OC} are the changes in V_{OD} and V_{OC} , respectively, when the DI input changes state.

Note 3: Maximum current level applies to peak current just prior to foldback-current limiting; minimum current level applies during current limiting.

Pin Assignment

SOP-8

Pin Description

PIN	NAME	FUNCTION
1	RO	Receiver Output, When RE is low and if $A-B \geq -50\text{mV}$, RO will be high; If $A-B \leq -200\text{mV}$, RO will be low.
2	/RE	Receiver Output Enable. Drive RE low to enable RO; RO is high impedance when RE is high. Drive RE high and DE low to enter low-power shutdown mode.
3	DE	Driver Output Enable. Drive DE high to enable driver outputs. These outputs are high impedance when DE is low. Drive RE high and DE low to enter low-power shutdown mode.
4	DI	Driver Input. With DE high, a low on DI forces noninverting output low and inverting output high.
5	GND	Ground
6	A	Noninverting Receiver Input and Noninverting Driver Output
7	B	Inverting Receiver Input and Inverting Driver Output
8	VCC	Positive Supply

Function Tables

TRANSMITTING

INPUTS			OUTPUTS

Important Notice

- Green Micro chip reserves the right to change products and documents without notice. Customers should obtain and verify the completeness of the latest technical information before placing orders. Meanwhile, Green Micro chip shall not assume any responsibility or obligation for non-officially revised documents.
- Any parameters in the entire product specification are for reference only, and actual application testing shall prevail. When customers use the products for system design, they must comply with safety regulations and independently assume the following responsibilities: selecting suitable Green Micro chip products according to application requirements; completing design verification and full-link testing of the application; and ensuring that the application complies with safety regulations or other requirements of the target market. Customers shall bear all personal or property losses caused by design defects or illegal operations, which shall have no relation to Green Micro chip.
- Green Micro chip products are prohibited from being used in scenarios such as life support, military equipment, and key aerospace applications. All accidents and legal liabilities arising from out-of-scope use shall be borne by the user, and Green Micro chip shall not be held responsible.
- All technical resources of Green Micro chip (including data sheets and reference designs) are provided "as is", without guarantee of no defects or universality, and without any express or implied warranties. The documents are only authorized for product development and research described in this document. Unauthorized use of intellectual property, public reproduction, and reverse engineering are strictly prohibited. All claims and losses caused by illegal use shall be borne by the user, and Green Micro chip shall not be liable.
