概述 Description

QX343 包含一个砷化铝镓 LED，它被光学耦合到一个具有功率输出级的集成电路上。该光电耦合器非常适合驱动电机控制逆变器应用中使用的功率 IGBT 和 MOSFET。输出级的高工作电压范围提供了栅极控制装置所需的驱动电压。该光电耦合器提供的电压和高峰值输出电流使其非常适合直接驱动额定功率高达 1200V/200A 的 IGBT。

The QX343 contains an AlGaAs LED, which is optically coupled to an integrated circuit with a power output stage. This optocoupler is ideally suited for driving power IGBTs and MOSFETs used in motor control inverter applications. The high operating voltage range of the output stage provides the drive voltages required by gate controlled devices. The voltage and high peak output current supplied by this optocoupler make it ideally suited for direct driving IGBT with ratings up to 1200 V / 200 A.
